Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Direct Submission
JOURNAL Submitted (20-JAN-2005) MIPS, Ingolstaedter Landstr.1, D-85764
Neuherberg, GERMANY
COMMENT Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by Agowa (Berlin/Germany) within the cDNA sequencing
consortium of the German Genome Project.
This clone (DKFZp686B15223) is available at the RZPD Deutsches
Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany.
Please contact RZPD for ordering:
http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZp686B15223
Further information about the clone and the sequencing project is
available at http://mips.gsf.de/projects/cdna/.

                      /clone_lib="NCI_CGAP_FH1"
                      /note="Organ: Chondrosarcoma; Vector: pT7T3-Pac
                      (Pharmacia) with a modified polylinker; Site_1: EcoR I;
                      Site_2: Not I; NCI_CGAP_FH1 is a normalized cDNA library
                      obtained from a cell line derived from grade I
                      chondrosarcoma tissue. The library was constructed and
                      normalized according to Bonaldo, Lennon and Soares, Genome
                      Research, 6:791-806, 1996. First strand cDNA synthesis was
                      primed with an oligo-dT primer containing a Not I site.
                      Double stranded cDNA was ligated to an EcoR I adaptor,
                      digested with Not I, and cloned directionally into
                      pT7T3-Pac vector. The oligonucleotide used to prime the
                      synthesis of first-strand cDNA contains a library tag
                      sequence that is located between the Not I site and the
                      (dT)18 tail. The sequence tag for this library is
                      AGAATCCGGC. The cell line was provided by Dr. James Martin
                      from the University of Iowa.
                      TAG_TISSUE=Human Chondrosarcoma Cell Line CS8 - Grade 1

                     /clone_lib="NCI_CGAP_FH1"
                     /note="Organ: Chondrosarcoma; Vector: pT7T3-Pac
                     (Pharmacia) with a modified polylinker; Site_1: EcoR I;
                     Site_2: Not I; NCI_CGAP_FH1 is a normalized cDNA library
                     obtained from a cell line derived from grade I
                     chondrosarcoma tissue. The library was constructed and
                     normalized according to Bonaldo, Lennon and Soares, Genome
                     Research, 6:791-806, 1996. First strand cDNA synthesis was
                     primed with an oligo-dT primer containing a Not I site.
                     Double stranded cDNA was ligated to an EcoR I adaptor,
                     digested with Not I, and cloned directionally into
                     pT7T3-Pac vector. The oligonucleotide used to prime the
                     synthesis of first-strand cDNA contains a library tag
                     sequence that is located between the Not I site and the
                     (dT)18 tail. The sequence tag for this library is
                     AGAATCCGGC. The cell line was provided by Dr. James Martin
                     from the University of Iowa.

This is the 5' sequence of the clone insert .
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de; sequenced by DKFZ (German Cancer Research Center, Heidelberg/Germany) within the cDNA sequencing consortium of the German Genome Project.
No s1 sequence available.
This clone (DKFZp781A1775) is available at the RZPD in Berlin. Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059 Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de.

/clone_lib="NIH_MGC_192"
/note="Vector: pExpress1; Site_1: SmaI; Site_2: NotI; The library was constructed by reverse transcription of 1 ug mRNA using the oligo dT primer GCGGCCGCCC(T)20 and an RNaseH + MMLV reverse transcriptase. Second strand synthesis was carried out by standard methods. The cDNA was size selected by agarose gel for > 1.2 kb, digested with Not I and directionally cloned into the vector Express-1 at the SmaI/NotI sites. DNA from the primary library was used for in vitro transcription from the T7 promoter to produce biotinylated RNA transcripts. These biotinylated transcripts, along with blocking oligos to the poly-A, multiple cloning site and primer regions, were hybridized with single stranded circles produced by phagmeid production from the primary library to a Cot value of 10-20. Strepavidin/phenol extraction was utilized to remove DNA:RNA hybrids leaving un-hybridized single stranded circles which were repaired by primer extension and transformed back into E. coli resulting in the normalized library. Average insert size 2.0 kb. 3' linker/adaptor sequence GCGGCCGCCC(T)20. This libary was constructed by Agencourt Bioscience."

                     /mol_type="mRNA"
                     /db_xref="taxon:9606"
                     /clone="UI-H-FH1-bfu-m-19-0-UI"
                     /tissue_type="Cell Line"
                     /dev_stage="Adult"
                     /lab_host="DH10B (Life Technologies)"
                     /clone_lib="NCI_CGAP_FH1"
                     /note="Organ: Chondrosarcoma; Vector: pT7T3-Pac
                     (Pharmacia) with a modified polylinker; Site_1: EcoR I;
                     Site_2: Not I; NCI_CGAP_FH1 is a normalized cDNA library
                     obtained from a cell line derived from grade I
                     chondrosarcoma tissue. The library was constructed and
                     normalized according to Bonaldo, Lennon and Soares, Genome
                     Research, 6:791-806, 1996. First strand cDNA synthesis was
                     primed with an oligo-dT primer containing a Not I site.
                     Double stranded cDNA was ligated to an EcoR I adaptor,
                     digested with Not I, and cloned directionally into
                     pT7T3-Pac vector. The oligonucleotide used to prime the
                     synthesis of first-strand cDNA contains a library tag
                     sequence that is located between the Not I site and the
                     (dT)18 tail. The sequence tag for this library is
                     AGAATCCGGC. The cell line was provided by Dr. James Martin
                     from the University of Iowa.
                     TAG_TISSUE=Human Chondrosarcoma Cell Line CS8 - Grade 1

                     /tissue_type="fetal eyes, lens, eye anterior segment,
                     optic nerve, retina, Retina Foveal and Macular, RPE and
                     Choroid"
                     /dev_stage="fetal and adult"
                     /lab_host="DH10B (Life Technologies) (T1 phage resistant)"
                     /clone_lib="UI-E-EJ0"
                     /note="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a
                     modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     UI-E-EJ0 is a subtracted cDNA library constructed
                     according to Bonaldo, Lennon and Soares, Genome Research,
                     6:791-806, 1996. First strand cDNA synthesis was primed
                     with an oligo-dT primer containing a Not I site. Double
                     stranded cDNA was ligated to an EcoR I adaptor, digested
                     with Not I, and cloned directionally into pT7T3-Pac
                     vector. The oligonucleotide used to prime the synthesis of
                     first-strand cDNA contains a library tag sequence that is
                     located between the Not I site and the (dT)18 tail. The
                     sequence tags for this library are: fetal eyes,
                     AGAATCAAGA; lens, CGATTAGCGA; eye anterior segment,
                     AATGCCGCAT; optic nerve, CCATTAAGTG; retina, CCGCG; Retina
                     Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This
                     library was created for the program, Gene Discovery in the
                     Visual System, supported by National Eye Institute (NEI).
                     TAG_TISSUE=human retina
                     TAG_LIB=UI-E-EJ0
                     TAG_SEQ=CCGCG"

                     /clone_lib="UI-E-EJ0"
                     /note="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a
                     modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     UI-E-EJ0 is a subtracted cDNA library constructed
                     according to Bonaldo, Lennon and Soares, Genome Research,
                     6:791-806, 1996. First strand cDNA synthesis was primed
                     with an oligo-dT primer containing a Not I site. Double
                     stranded cDNA was ligated to an EcoR I adaptor, digested
                     with Not I, and cloned directionally into pT7T3-Pac
                     vector. The oligonucleotide used to prime the synthesis of
                     first-strand cDNA contains a library tag sequence that is
                     located between the Not I site and the (dT)18 tail. The
                     sequence tags for this library are: fetal eyes,
                     AGAATCAAGA; lens, CGATTAGCGA; eye anterior segment,
                     AATGCCGCAT; optic nerve, CCATTAAGTG; retina, CCGCG; Retina
                     Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This
                     library was created for the program, Gene Discovery in the
                     Visual System, supported by National Eye Institute (NEI)."

                     /lab_host="DH10B (Life Technologies) (T1 phage resistant)"
                     /clone_lib="UI-CF-EC1"
                     /note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a
                     modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     UI-CF-EC1 is a normalized cDNA library containing the
                     following tissue(s): Normal lung from adult and from fetal
                     day 64, day 87, week 19 and week 42. The library was
                     constructed according to Bonaldo, Lennon and Soares,
                     Genome Research, 6:791-806, 1996. First strand cDNA
                     synthesis was primed with an oligo-dT primer containing a
                     Not I site.  Double stranded cDNA was ligated to an EcoR I
                     adaptor, digested with Not I, and cloned directionally
                     into pT7T3-Pac vector. The oligonucleotide used to prime
                     the synthesis of first-strand cDNA contains a library tag
                     sequence that is located between the Not I site and the
                     (dT)18 tail. The sequence tag for this library is
                     AAGTGCTTAC.
                     TAG_TISSUE=Normal Lung Epithelial Cells Tissue nos 369-371

            Clones are derived from the bovine BAC library CHORI-240
            (http://www.chori.org/bacpac/bovine240.htm). For BAC library
            availability, please contact Pieter de Jong (pdejong@mail.cho.org).
            Clones may be purchased from BACPAC Resources
            (http://www.chori.org/bacpac/ordering_information.htm). This work
            was undertaken as part of the International Bovine BAC Mapping
            Consortium (IBBMC) by by University of Illinois at Urbana
            Champaign, USA with funds provided by grant No. AG202-34480-11828
            from USDA-CSREES and AG99-35205-8534 from USDA/NRI (Livestock
            Genome Sequencing Initiative)

                     /note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a
                     modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     UI-CF-DU1 is a normalized cDNA library containing the
                     following tissue(s): Primary Lung Epithelial Cells The
                     library was constructed according to Bonaldo, Lennon and
                     Soares, Genome Research, 6:791-806, 1996. First strand
                     cDNA synthesis was primed with an oligo-dT primer
                     containing a Not I site.  Double stranded cDNA was ligated
                     to an EcoR I adaptor, digested with Not I, and cloned
                     directionally into pT7T3-Pac vector. The oligonucleotide
                     used to prime the synthesis of first-strand cDNA contains
                     a library tag sequence that is located between the Not I
                     site and the (dT)18 tail. The sequence tag for this
                     library is GGCTGTAGGC.
                     TAG_TISSUE=Lung Epithelial Cells Tissue nos 359-368
                     TAG_LIB=UI-CF-DU1
                     TAG_SEQ=GGCTGTAGGC"

                     NCI_CGAP_FT1 is a normalized cDNA library constructed from
                     a pool of 81 RNA samples from Alveolar Macrophages
                     challenged with different treatments. The mRNA samples
                     were a mixture of these conditions (times refer to
                     incubations following isolation by bronchoalveolar lavage)
                     (some normal donor macrophages were cultured in some of
                     the conditions, other donor macrophages in different
                     conditions). The mRNA samples were pooled for library
                     construction. Control 0 hours; control 3 hours; control 24
                     hours; LPS 100 ng/ml, 3 hours; LPS 100 ng/ml, 24 hours;
                     PMA 10 ng/ml, 3 hours; PMA 10 ng/ml, 24 hours; Klebsiella
                     moi 10, 3 hours; Klebsiella moi 10, 24 hours; Staph aureus
                     moi 10, 3 hours; Staph aureus moi 10, 24 hours; Adenoviral
                     vector (Ad5 CMV eGFP), moi 500, 3 hours; Adenoviral vector
                     (Ad5 CMV eGFP), moi 500, 24 hours; wt adenovirus moi 500,
                     3 hours; wt adenovirus moi 500, 24 hours; Ad vector + LPS
                     3 hours; Ad vector + LPS 24 hours; wt adenovirus + LPS 3
                     hours; wt adenovirus + LPS 24 hours. The library was
                     normalized according to Bonaldo, Lennon and Soares, Genome
                     Research, 6:791-806, 1996. First strand cDNA synthesis was
                     primed with an oligo-dT primer containing a Not I site.
                     Double stranded cDNA was ligated to an EcoR I adaptor,
                     digested with Not I, and cloned directionally into
```

pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCG. The tissue was provided by Dr. Gary W. Hunninghake of the University of Iowa.
TAG_TISSUE=Human Lung Alveolar Macrophage
TAG_LIB=UI-H-FT1
TAG_SEQ=GGCCATGCCG"

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 3
AL355340
LOCUS AL355340 112442 bp DNA linear PRI 18-MAY-2005
DEFINITION Human DNA sequence from clone RP11-383C6 on chromosome 10 Contains the TRUB1 gene for TruB pseudouridine (psi) synthase homolog 1 (E. coli), a novel gene and a CpG island, complete sequence.
ACCESSION AL355340
VERSION AL355340.17 GI:21436504
KEYWORDS HTG; TRUB1.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 (bases 1 to 112442)
AUTHORS Leongamornlert,D.
TITLE Direct Submission
JOURNAL Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT On Jun 17, 2002 this sequence version replaced gi:16416169.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr10
RP11-383C6 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACe3.6

Contact: vega@sanger.ac.uk

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

            Contact: humquery@sanger.ac.uk
            -------------- Project Information
            Center project name: bA203A7
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Sequencing vector: plasmid; L08752; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Consensus quality: 174005 bases at least Q40
            Consensus quality: 174806 bases at least Q30
            Consensus quality: 175273 bases at least Q20
            Insert size: 175632; sum-of-contigs
            Insert size: 155595; 14.1% error; agarose-fp
            Quality coverage: 6.85x in Q20 bases; sum-of-contigs Quality
            coverage: 8.13x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1    23099: contig of 23099 bp in length
            *   23100    23199: gap of 100 bp
            *   23200    38049: contig of 14850 bp in length
            *   38050    38149: gap of 100 bp
            *   38150    65430: contig of 27281 bp in length
            *   65431    65530: gap of 100 bp
            *   65531   100606: contig of 35076 bp in length
            *  100607   100706: gap of 100 bp
            *  100707   156710: contig of 56004 bp in length
            *  156711   156810: gap of 100 bp
            *  156811   159233: contig of 2423 bp in length
            *  159234   159333: gap of 100 bp
            *  159334   171732: contig of 12399 bp in length
            *  171733   171832: gap of 100 bp
            *  171833   174095: contig of 2263 bp in length
            *  174096   174195: gap of 100 bp
            *  174196   176432: contig of 2237 bp in length.

DEFINITION  Sequence 4 from Patent WO9851790.
ACCESSION   AX033912
VERSION     AX033912.1  GI:10280480
KEYWORDS    .
SOURCE      unidentified
  ORGANISM  unidentified
            unclassified sequences.
REFERENCE   1
  AUTHORS   Cancilla,M.R., Choo,K.H. and Du,S.D.
  TITLE     A novel nucleic acid molecule
  JOURNAL   Patent: WO 9851790-A 4 19-NOV-1998;

COMMENT     On Jan 4, 2002 this sequence version replaced gi:17981677.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0753F04
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-762N20, 2000 bp overlap;
            the clone sequenced to the right is RP11-485D7.  Actual start of
            this clone is at base position 98039 of RP11-762N20; actual end is
            at base position 100020 of RP11-753F4.

            Data from AC09338 and AC074188 was used to finish this clone,
            AC092165. Polymorphisms have been identified between AC074188 and
            AC092165.

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: HMOR
                Center clone name: RP11-91N19
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 135987 bases at least Q40
                Consensus quality: 145984 bases at least Q30
                Consensus quality: 149762 bases at least Q20
                Estimated insert size: 149948; sum-of-contigs estimation
                Estimated insert size: 249006; agarose-fp estimation
                Quality coverage: 2.8x in Q20 bases; agarose-fp estimation
                Quality coverage: 4.6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 15 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    44367: contig of 44367 bp in length
            *    44368    44467: gap of unknown length
            *    44468    73078: contig of 28611 bp in length
            *    73079    73178: gap of unknown length
            *    73179    94206: contig of 21028 bp in length
            *    94207    94306: gap of unknown length
            *    94307   112788: contig of 18482 bp in length
            *   112789   112888: gap of unknown length
            *   112889   120323: contig of 7435 bp in length
            *   120324   120423: gap of unknown length
            *   120424   130440: contig of 10017 bp in length
            *   130441   130540: gap of unknown length

  TITLE     Direct Submission
  JOURNAL   Submitted (16-JUL-2000) Genome Sequencing Center, Washington
            University School of Medicine, 4444 Forest Park Parkway, St. Louis,
            MO 63108, USA
COMMENT     On Feb 21, 2001 this sequence version replaced gi:9802849.

            ---------------- Genome Center ----------------
            Center: Washington University Genome Sequencing Center
            Center code: WUGSC
            Web site:http://genome.wustl.edu/gsc/index.shtml
            -------------- Project Information --------------
            Center project name: H_NH0341G20
            -------------- Summary Statistics  --------------
            Sequencing vector: M13; 94%
            Sequencing vector: plasmid; 6%
            Chemistry: Dye-primer ET; 94% of reads
            Chemistry: Dye-terminator Big Dye; 6% of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 167169 bases at least Q40
            Consensus quality: 170689 bases at least Q30
            Consensus quality: 172797 bases at least Q20
            Insert size: 186000; agarose-fp
            Insert size: 178216; sum-of-contigs
            Quality coverage: 5.07 in Q20 bases; agarose-fp
            Quality coverage: 5.39 in Q20 bases; sum-of-contigs
            ------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 17 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3838: contig of 3838 bp in length
            *     3839     3938: gap of unknown length
            *     3939     9367: contig of 5429 bp in length

  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 16, 2001 this sequence version replaced gi:16304759.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP11-251B9 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm

            --------------
            Draft Sequence Produced by Genome Sequencing Center, Washington
            University School of Medicine, 4444 Forest Park Parkway, St. Louis,
            MO 63108, USA
            http://genome.wustl.edu/gsc/index.shtml
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_MS2005A22
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted;
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            Clone CTD-2005A22 is from a release of the human BAC library CTD.
            The library contains cloned DNA from human sperm. See:  Shizuya et
            al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al.,
            Genomics 34:213-8 (1996). The clone is available from Research
            Genetics, Inc. (http://www.resgen.com).
            VECTOR:  pBeloBAC11
            Selection:  chloramphenicol

            NEIGHBORING SEQUENCE INFORMATION:

            The clone sequenced to the left is RP11-719M18, 2000 bp overlap;
            the clone sequenced to the right is RP11-575B4, 2000 bp overlap.
            Actual start of this clone is at base position 120807 of
            RP11-719M18; actual end is at base position 7921 of RP11-575B4.

            Polymorphisms have been identified between AC108017 and AC019341.

COMMENT     On Apr 12, 2005 this sequence version replaced gi:61326250.
            ------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            ------------- Project Information
                 Center project name: jlu
                 Center clone name: 156A05

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is generally based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            ------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 135058 bases at least Q40
                 Consensus quality: 135283 bases at least Q30
                 Consensus quality: 135424 bases at least Q20
                 Insert size: 142000; agarose-fp
                 Insert size: 135518; sum-of-contigs
                 Quality coverage: 9.47x in Q20 bases; agarose-fp
                 Quality coverage: 9.92x in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1    30739: contig of 30739 bp in length
            *    30740    30839: gap of unknown length
            *    30840   114090: contig of 83251 bp in length
            *   114091   114190: gap of unknown length
            *   114191   129767: contig of 15577 bp in length
            *   129768   129867: gap of unknown length
            *   129868   135818: contig of 5951 bp in length.

  JOURNAL   Submitted (01-APR-2005) NIH Intramural Sequencing Center, 5625
            Fishers Lane, Rockville, MD 20852, USA
COMMENT     On Apr 1, 2005 this sequence version replaced gi:60223201.
            -------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            -------------- Project Information
                 Center project name: jlt
                 Center clone name: 551I19

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
```

```
          data from individual subclones, overlaps with neighboring
          clones, alignment with available reference sequence (e.g.,
          human), and/or confirmation by PCR testing. In addition,
          the sequence assembly is generally based on at least 8X average
          coverage in Q20 bases and has been reviewed to rule out
          gross misassemblies, the low-quality ends of sequence
          contigs have been trimmed away, and each base is associated
          with a Phrap-derived quality score.
          -------------- Summary Statistics
               Sequencing vector: plasmid; n/a; 100% of reads
               Chemistry: Dye-terminator Big Dye; 100% of reads
               Assembly program: Phrap; version 0.990319
               Consensus quality: 140629 bases at least Q40
               Consensus quality: 140781 bases at least Q30
               Consensus quality: 140889 bases at least Q20
               Insert size: 148000; agarose-fp
               Insert size: 141010; sum-of-contigs
               Quality coverage: 9.15x in Q20 bases; agarose-fp
               Quality coverage: 9.61x in Q20 bases; sum-of-contigs
          --------------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 6 contigs. Gaps between the contigs
          * are represented as runs of N. The order of the pieces
          * is believed to be correct as given, however the sizes
          * of the gaps between them are based on estimates that have
          * provided by the submittor.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.
          *        1    42915: contig of 42915 bp in length
          *    42916    43015: gap of unknown length
          *    43016    58130: contig of 15115 bp in length
          *    58131    58230: gap of unknown length
          *    58231    88548: contig of 30318 bp in length
          *    88549    88648: gap of unknown length
          *    88649   106602: contig of 17954 bp in length
          *   106603   106702: gap of unknown length
          *   106703   114237: contig of 7535 bp in length
          *   114238   114337: gap of unknown length
          *   114338   141510: contig of 27173 bp in length.

COMMENT     NEDO human cDNA sequencing project supported by Ministry of
            Economy, Trade and Industry of Japan; cDNA full insert sequencing:
            Research Association for Biotechnology (RAB); cDNA library
            construction: Helix Research Institute (HRI) (supported by Japan
            Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
            HRI, and Biotechnology Center, National Institute of Technology and
            Evaluation; clone selection for full insert sequencing: HRI and
            RAB; annotation: HRI and RAB.

  TITLE     Direct Submission
  JOURNAL   Submitted (03-JUL-1998) Genome Science & Technology Center,
            University of Texas Southwestern Medical Center, 5323 Harry Hines
            Blvd, Dallas, TX 75235-8591, USA
COMMENT     On Jul 1, 1998 this sequence version replaced gi:3152625.
            NOTE: Extent of pDJ1082L12 overlap with mapped clones; SP6 PAC
            cloning end: 1. .8775, pDJ59m18; T7 PAC cloning end: 45252. .115958,
            6-109h6.  Further information regarding the map of this region or
            annotation of pDJ1082L12 can be found at
            http://gestec.swmed.edu/chromoso2.htm.
            CHROMSOMAL LOCUS: This PAC clone comes from the Usher syndrome
            region (USH1C) mapped between STSs markers D11S1310 and 1115A14.
            MARKER CONFIRMATION: STSs/ESTs sequence confirmed; D11S4130, KNCN1,
            and MyoD1.
            MAPPED CLONE OVERLAP: pDJ59m18 and 6-109h6.
            IMPORTANT: This submission contains the entire insert of clone
            pDJ1082L12.  pDJ1082L12 comes from a PAC library constructed atthe
            Roswell Park Cancer Institute by the Pieter de Jong group.  This
            clone has been finished according to strict quality criteria and
            attempts have been made to resolve all base calling problems such
            as compressions and repetitive elements. The expected Phred/Phrap
            calculated errors/10kb is 0.39.  In addition, this sequence has
            been finished such that 99.9% of consensus base calls consist of
            either double-stranded coverage or 2 types of labeling chemistry on
            one strand.

RESULT 25
HS168L15/c
LOCUS HS168L15 178098 bp DNA linear PRI 18-MAY-2005
DEFINITION Human DNA sequence from clone RP1-168L15 on chromosome 6q26-27 Contains the 3' end of the RPS6KA2 gene for ribosomal protein S6 kinase, 90kD, polypeptide 2 (RSK3), the gene for brain protein 44-like (BRP441), the 5' end of the gene for a novel protein similar to RIKEN cDNA 5630401J11 (pRGR1) (MGC19825) and 5 CpG islands, complete sequence.
ACCESSION AL022069
VERSION AL022069.1 GI:3256174
KEYWORDS HTG; BRP441; CpG island; MGC19825; pRGR1; RPS6KA2.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 (bases 1 to 178098)
AUTHORS Williams,S.
TITLE Direct Submission
JOURNAL Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT On Jun 26, 1998 this sequence version replaced gi:2950404.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6
RP1-168L15 is from the library RPCI-1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pCYPAC2

Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: vega@sanger.ac.uk

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

  AUTHORS   Lovell,J.
  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On May 31, 2001 this sequence version replaced gi:13157565.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-96C13 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

  TITLE     Direct Submission
  JOURNAL   Submitted (24-OCT-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Oct 25, 2001 this sequence version replaced gi:13990635.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP11-286N24 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-286N24 It may be shorter because we sequence overlapping
            sections only once, except for a short overlap.
            The true right end of clone RP11-286N24 is at 114056 in this
            sequence. The true left end of clone RP11-2L13 is at 724 in this
            sequence. The true right end of clone RP11-152M20 is at 2000 in
            this sequence.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jun 21, 2000 this sequence version replaced gi:7940170.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            RP1-45N11 is from the library RPCI-1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2.

-------------- Project Information
Center project name: L5972
Center clone name: 450_D_8
-------------- Summary Statistics
Sequencing vector: M13; M77815; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 161486 bases at least Q40
Consensus quality: 167277 bases at least Q30
Consensus quality: 169194 bases at least Q20
Insert size: 178000; agarose-fp
Insert size: 170261; sum-of-contigs
Quality coverage: 4.3 in Q20 bases; agarose-fp
Quality coverage: 4.5 in Q20 bases; sum-of-contigs
--------------.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 19 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.

```
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *        1     1174: contig of 1174 bp in length
          *     1175     1274: gap of 100 bp
          *     1275     3364: contig of 2090 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Dec 12, 1997 this sequence version replaced gi:1772957.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 22, constructed by the Sanger Centre Chromosome 22
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr22
            RP3-370M22 is from the library RPCI-3 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2

            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

RESULT 33
HS366N23/c
LOCUS       HS366N23               98517 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP3-366N23 on chromosome 6q27
            Contains the UNC93A gene for unc-93 homolog A (C. elegans), the
            gene for NYD-TSPG protein,  a Mitotic Feedback Control Protein
            MADP2 Homolog LIKE pseudogene and the 3' end  of the TCP10 gene for
            t-complex 10 (mouse), complete sequence.
ACCESSION   AL021331
VERSION     AL021331.1  GI:3355532
KEYWORDS    HTG; C46F11.1; MADP2; Mitotic Feedback Control; NYD-TPSG;
            t-complex; TCP10; UNC-93.
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
            Hominidae; Homo.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jul 30, 1998 this sequence version replaced gi:3334553.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP3-366N23 is from the library RPCI-3 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2
            ---------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC

            ----------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 14, 2001 this sequence version replaced gi:15590740.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP3-436N22 is from the library RPCI-3 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

            -------------- Project Information
                Center project name: L5968
                Center clone name: 418_M_15
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 158288 bases at least Q40
                Consensus quality: 160068 bases at least Q30
                Consensus quality: 160845 bases at least Q20
                Insert size: 163000; agarose-fp
                Insert size: 161363; sum-of-contigs
                Quality coverage: 5.9 in Q20 bases; agarose-fp
                Quality coverage: 6.0 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3780: contig of 3780 bp in length
            *     3781     3880: gap of 100 bp
            *     3881     7396: contig of 3516 bp in length
            *     7397     7496: gap of 100 bp
            *     7497    14714: contig of 7218 bp in length
            *    14715    14814: gap of 100 bp
            *    14815    31890: contig of 17076 bp in length
            *    31891    31990: gap of 100 bp
            *    31991    54940: contig of 22950 bp in length
            *    54941    55040: gap of 100 bp
            *    55041    79944: contig of 24904 bp in length
            *    79945    80044: gap of 100 bp
            *    80045   104673: contig of 24629 bp in length
            *   104674   104773: gap of 100 bp
            *   104774   131627: contig of 26854 bp in length
            *   131628   131727: gap of 100 bp
            *   131728   162163: contig of 30436 bp in length.

            Contact: humquery@sanger.ac.uk
            -------------- Project Information
            Center project name: bA258J6
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 166627 bases at least Q40
            Consensus quality: 166849 bases at least Q30
            Consensus quality: 166945 bases at least Q20
            Insert size: 169424; sum-of-contigs
            Insert size: 172092; 4.2% error; agarose-fp
            Quality coverage: 9.31x in Q20 bases; sum-of-contigs Quality
            coverage: 9.16x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *         1   169424: contig of 169424 bp in length.

            Drive, Walnut Creek, CA 94598, USA
COMMENT     On Jan 28, 2003 this sequence version replaced gi:15187197.
            Draft Sequence Produced by DOE Joint Genome Institute
            www.jgi.doe.gov
            Finishing Completed at Stanford Human Genome Center
            www-shgc.stanford.edu
            Quality: Phrap Quality >=40 99.8% of Sequence;
            Estimated Total Number of Errors is 2.1.
            NOTE:  This insert is not the entire sequence of the clone (entire
            sequence is 133kb). It is clipped at the overlap with AC006077. The
            number of bases overlapped is 36042.

LOCUS       AL357520              178942 bp    DNA     linear   PRI 18-MAY-2005
```

```
DEFINITION  Human DNA sequence from clone RP11-288D15 on chromosome 10 Contains
            a pseudogene similar to part of glycogen synthase kinase 3 and a
            ubiquitin-conjugating enzyme pseudogene, complete sequence.
ACCESSION   AL357520
VERSION     AL357520.12  GI:15620611
KEYWORDS    HTG; ubiquitin-conjugating.
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
            Hominidae; Homo.
REFERENCE   1  (bases 1 to 178942)
  AUTHORS   Pearce,A.
  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 14, 2001 this sequence version replaced gi:14485342.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            RP11-288D15 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New isolated nucleic acid comprising neocentromere sequences from
PT eukaryotic chromosome - used to produce replicable, segregating
PT artificial chromosomes that can carry large amounts of DNA for gene
PT therapy.
XX
PS Claim 8; Fig 6; 540pp; English.
XX
CC The present sequence represents the HC-contig derived from normal human
CC chromosome 10, 10q25.2 region. This region can be naturally mutated to
CC produce an unusual chromosomal marker referred to as mardel(10). The
CC mardel(10) marker is mitotically stable and contains a functional
CC neocentromere at a location regarded as non-centromeric. This
CC neocentromere maps to q25.2 on chromosome 10. The specification describes
CC nucleic acid sequences derived from a eukaryotic chromosome, including a
CC neocentromere or its functional derivative or hybrid, that are able, in a
CC compatible cell, of replicating, acting as extra-chromosomal element and
CC segregating during cell division. The sequences can be used to construct
CC artificial chromosomes for use in gene therapy comprising a replicable,
CC segregating nucleic acid that confers a specific phenotype on cells.
CC Human artificial chromosomes can propagate in human cells and carry large
CC amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal,
CC they are not mutagenic. The artificial chromosomes are also useful for
CC generation of transgenic plants and animals, in production of proteins
CC and to make diagnostic reagents, e.g. for expression of cytokines,
CC receptors and growth factors, or to increase the copy number of a gene in
CC a cell. The constructs may also be used for functional and structural
CC analysis of chromosomes

PT New isolated nucleic acid comprising neocentromere sequences from
PT eukaryotic chromosome - used to produce replicable, segregating
PT artificial chromosomes that can carry large amounts of DNA for gene
PT therapy.
XX
PS Claim 9; Fig 16A; 540pp; English.
XX
CC The present sequence represents the NC-contig derived from a mutated
CC human chromosome 10, 10q25.2 region. The sequence contains an unusual
CC chromosomal marker referred to as mardel(10). The mardel(10) marker is
CC mitotically stable and contains a functional neocentromere at a location
CC regarded as non-centromeric. This neocentromere maps to q25.2 on
CC chromosome 10. The specification describes nucleic acid sequences derived
CC from a eukaryotic chromosome, including a neocentromere or its functional
CC derivative or hybrid, that are able, in a compatible cell, of
CC replicating, acting as extra-chromosomal element and segregating during
CC cell division. The sequences can be used to construct artificial
CC chromosomes for use in gene therapy comprising a replicable, segregating
CC nucleic acid that confers a specific phenotype on cells. Human artificial
CC chromosomes can propagate in human cells and carry large amounts of DNA
CC (e.g. therapeutic genes), and, being extra-chromosomal, they are not
CC mutagenic. The artificial chromosomes are also useful for generation of
CC transgenic plants and animals, in production of proteins and to make
CC diagnostic reagents, e.g. for expression of cytokines, receptors and
CC growth factors, or to increase the copy number of a gene in a cell. The
CC constructs may also be used for functional and structural analysis of
CC chromosomes

```
CC   The invention relates to a nucleic acid hybridisation probe comprising a
CC   labelled, single copy nucleic acids of at least 50 nucleotides, which
CC   will hybridise to a deduced single copy sequence interval in target
CC   nucleic acid (TNA) of known sequence. The single copy sequence is deduced
CC   by comparing the target nucleic acid (e.g. a disease causing gene) with a
CC   collection of high and low complexity repeat sequences as found in the
CC   genome of the organism from containing the target nucleic acid. The probe
CC   is generated by PCR on the target sequence. The probe is essentially free
CC   of blocking nucleic acid sequences which will hybridise to repeat
CC   sequences within the genome of which the TNA is a part, and is labelled
CC   with a label selected from fluorochrome-responsive labels, fluorochromes,
CC   calorimetric chemical, conjugated proteins, antibodies, antigens and
CC   their mixtures. The probe is useful in a hybridisation method, where the
CC   hybridisation method is from in situ hybridisation, Southern blot, and
CC   other methods in which nucleic acid is immobilised, where the method
CC   further comprises selecting a single copy nucleic acid which will
CC   hybridise to a duplicon or triplicon sequence domain. The probe is useful
CC   for determining the existence of previously unknown repeat sequence
CC   families in a genome. The method comprises reacting a labelled probe with
CC   the genome, causing the probe to hybridise and ascertaining if the probe
CC   hybridises to the genome at more than three preferably ten different
CC   locations as a determination of new repeat sequence family, where the
CC   determining step comprises selecting the single copy sequence from a
CC   duplicon or triplicon sequence domain. The probe is useful for
CC   determining a chromosome breakpoint and is useful in the fields for
CC   cytogenetics and molecular genetics for determining the presence of
CC   specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
CC   the probes may be used to analyse specific chromosomal locations by in
CC   situ hybridisation as a detection of acquired or inherited genetic
CC   diseases especially for detection of genetic or neoplastic disorders.
CC   Unlike prior art techniques, the probe permits more precise chromosomal
CC   breakpoint determinations by in situ hybridisation. The genomic sequence
CC   comprising the human HIRA gene (histone cell cycle regulation defective,
CC   S. cerevisiae, homologue A) was analysed for single copy sequence
CC   intervals for use as probes of the invention. HIRA is located on
CC   chromosome 22 as a duplicate, deletions of 1 copy lead to DiGeorge and
CC   Velo-Cardio-facial syndromes. The present sequence is a high complexity
CC   repeat found within the human genome used to analyse the HIRA gene for
CC   repeat regions. Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic format
CC   directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030224356.

PT Single copy genomic hybridization probes for detecting specific nucleic
PT acid sequences in sample by in situ hybridization useful for detection of
PT acquired or inherited genetic diseases.
XX
PS Example 1; SEQ ID NO 148; 67pp; English.
XX
CC The invention describes a nucleic acid hybridization probe (I) comprising
CC a labeled, single copy nucleic acids of at least 50 nucleotides, which
CC will hybridize to a deduced single copy sequence interval in target
CC nucleic acid (TNA) of known sequence. (I) is useful in a hybridization
CC method which comprises preparing a reaction mixture comprising TNA and
CC (I) which hybridizes to TNA, and causing (I) to hybridize to TNA, where
CC the hybridization method is from in situ hybridization, Southern blot,
CC and other methods in which nucleic acid is immobilized, where the method
CC further comprises selecting a single copy nucleic acid which will
CC hybridize to a duplicon or triplicon sequence domain. (I) is useful for:
CC determining the existence of previously unknown repeat sequence families
CC in a genome; determining a chromosome breakpoint and in the fields of
CC cytogenetics and molecular genetics for determining the presence of
CC specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
CC the probes may be used to analyze specific chromosomal locations by in
CC situ hybridization as a detection of acquired or inherited genetic
CC diseases especially for detection of genetic or neoplastic disorders.
CC Unlike prior art techniques, (I) permits more precise chromosomal
CC breakpoint determinations by in situ hybridization. Hybridization
CC techniques utilizing (I), have made it possible to obtain reliable,
CC easily detectable signals with relatively small probes. A readily
CC detectable signal was obtained with a probe on the order of 2 kb in
CC length, using fluorescent in situ hybridization (FISH) technology. This
CC sensitivity of (I) is improved compared to the prior art, because the
CC probes of (I) are homogeneous single copy sequences. However, smaller
CC amplified segments, each comprising non-repetitive sequences, may also be
CC used in combination as probes to achieve adequate signals for in situ
CC hybridization. Complex single copy probes that hybridize to duplicated or
CC triplicated targets can also increase hybridization signals. This
CC sequence represents a human HIRA genomic sequence that shows homology to
CC a known high-complexity repeat sequence family of the human genome and is
CC used in the creation of an HIRA gene probe.

PT   New genetic variants of cholinergic receptor, nicotinic, gamma
PT   polypeptide, CHRNG gene useful for therapeutic purposes and for
PT   expressing CHRNG protein useful in identifying drugs to treat myasthenia
PT   gravis.
XX
PS   Claim 1; SEQ ID NO 1; 107pp; English.
XX
CC   This invention relates to novel genetic markers and variants of the gene
CC   encoding the cholinergic receptor, nicotinic, gamma polypeptide (CHRNG),
CC   located on chromosome 2q33-p34. Specifically, it refers to a set of
CC   haplotypes in the CHRNG gene, which are useful for improving the
CC   efficiency and output of the drug discovery process by the identification
CC   of drugs that can target the CHRNG protein and treat disorders associated
CC   with its abnormal expression or function. The CHRNG protein is the gamma
```

CC subunit of the acetylcholine receptor (AChR), and autoantibodies directed
CC against the embryonic form of AChR play an important role in the
CC pathogenesis of neonatal myasthenia gravis. As such, the present
CC invention describes a method for identifying an association between a
CC trait (such as a clinical response to a drug that targets CHRNG) and a
CC haplotype or haplotype pair of the CHRNG gene. Furthermore, it is useful
CC in screening assays, for the development of diagnostic tests and for
CC therapeutic treatments of myasthenia gravis using gene therapy. This
CC polynucleotide is the human CHRNG genomic DNA sequence that contains the
CC SNPs of the invention.

PT expression and activity, or as a target of gene therapy.
XX
PS Claim 1; SEQ ID NO 519; 305pp; English.
XX
CC The invention relates to a novel human polynucleotide and the encoded
CC polypeptide. A polynucleotide of the invention may have a use in gene
CC therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful
CC as a primer for synthesizing the polynucleotide or as a probe for
CC detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are
CC useful in gene therapy, for developing a diagnostic marker or medicines
CC for regulating their expression and activity, or as a target of gene
CC therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides
CC are useful as pharmaceutical agents. The present sequence represents a
CC cDNA sequence of the invention.

PT   Novel human cancer associated protein encoded within open reading frame
PT   of cancer associated gene, useful as targets for diagnosing cancer.
XX
PS   Claim 16; SEQ ID NO 688; 182pp; English.
XX
CC   The invention relates to cancer-associated proteins (CAP) and the cancer-
CC   associated (CA) nucleic acids encoding them. The invention also relates
CC   to a method for treating cancers involving administering to a patient an
CC   inhibitor of CAP, and a method of screening for anticancer activity in a
CC   potential drug involving providing a cell that expresses a CA gene,
CC   contacting a tissue sample derived from a cancer cell with an anticancer
CC   drug candidate and monitoring the effect of the anticancer drug candidate
CC   on expression of the CA gene. The CAP proteins are useful for detecting
CC   cancer associated with expression of a CAP protein in a test cell sample
CC   and for screening for a bioactive agent capable of modulating the
CC   activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC   cancer, involving determining the expression of a CA nucleic acid in a
CC   tissue. This sequence represents a human CA gene of the invention. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

XX
PT Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT useful for preventing, diagnosing and/or treating nervous system cancers
PT and metastases.
XX
PS Disclosure; SEQ ID NO 12875; 1701pp + Sequence Listing; English.
XX
CC The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease;
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT Isolated nucleic acid molecule encoding a reproductive system antigen is
PT used in preventing, treating or ameliorating a medical condition.
XX
PS Disclosure; SEQ ID NO 7049; 1297pp + Sequence Listing; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human reproductive system related antigens. These can be used
CC in the prevention and treatment of reproductive system disorders,
CC including cancer. The present sequence is a genomic sequence encoding a
CC protein of the invention

PT Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT comprises a nucleotide sequence.
XX
PS Claim 1; SEQ ID NO 244; 0pp; English.
XX
CC The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable

```
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 754; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT New human tumor suppressor proteins, useful for developing human
PT therapeutic agents, or preventing or treating inflammation, or disorders
PT associated with cell proliferation, e.g. bone cancer, brain cancer,
PT leukemia or lymphoma.
XX
PS Claim 4; Fig 3; 200pp; English.
XX
CC The invention relates to human tumour suppressor polypeptides and
CC polynucleotides. Sequences of the invention are useful for diagnosing,
CC preventing or treating inflammation, or disorders associated with cell
CC proliferation and apoptosis e.g. bone cancer, brain cancer, cervix
CC cancer, adenocarcinoma, leukaemia, lymphoma or melanoma. They are
CC particularly useful as models for developing human therapeutic targets,
CC identifying therapeutic proteins, or serving as targets for the
CC development of human therapeutic agents that modulate tumour suppressor
CC protein activity in cells and tissues that express the tumour suppressor
CC protein. Polypeptides of the invention are used for identifying agents
CC that modulate their activity. They are useful for raising antibodies or
CC eliciting an immune response; as a reagent in assays designed to
CC quantitatively determine levels of the protein (or its binding partner or
CC ligand) in biological fluids; or as markers for tissues in which the
CC corresponding protein is preferentially expressed. The invention is also
CC used as vaccines. The present sequence is human tumour suppressor gene
CC located on chromosome 13

PT   Genes containing coding mononucleotide repeats are useful in developing
PT   an antibody against MSI-H (hugh (sic high) microsatellite instability)
PT   tumor.
XX
PS   Claim 3; SEQ ID NO 44; 578pp; Korean.
XX
CC   The present invention describes genes containing coding mononucleotide
CC   repeats (cMNRs). The genes are useful for the development of an antibody
CC   against MSI-H (hugh microsatellite instability) tumour. Also described:
CC   (1) cDNA genes containing cMNRs with 10 or more nucleotide sequences, and
CC   selected from the cDNA genes having the nucleotide sequences of SEQ ID
CC   NOs:1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35,
CC   37, 39, 41 and 43; (2) cDNA genes, which are frameshift mutated by
CC   deletion or insertion of one or more base in the cMNRs; (3) genomic DNA
CC   genes containing cMNRs with 10 or more nucleotide sequences, and selected
CC   from the genomic DNA genes having the nucleotide sequences of SEQ ID
CC   NOs:2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36,
CC   38, 40, 42 and 44; and (4) genomic DNA genes, which are frameshift
CC   mutated by deletion or insertion of one or more base in the cMNRs. The
CC   genes have cytostatic activity. The present sequence represents an MSI-H
CC   carcinoma genomic DNA sequence from the present invention.

PT   New isolated cancer-associated polynucleotides and polypeptides useful
PT   for diagnosing, preventing or treating cancers, especially lymphoma and
PT   leukemia, or in screening for agents that modulate cancer.
XX
```

```
PS   claim 16; seqid 688; 310pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
CC   in the specification, or its complement. The nucleic acids encode cancer-
CC   associated proteins. Also included are an expression vector comprising
CC   the isolated nucleic acid cited above, a host cell comprising the above
CC   recombinant nucleic acid or expression vector, a microarray for detecting
CC   a cancer-associated (CA) nucleic acid comprising at least one probe
CC   comprising at least 10 contiguous nucleotides of any of the above-
CC   mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC   an open reading frame of a CA sequence selected from any of the 95
CC   polynucleotide sequences as mentioned in the specification, or its
CC   complement), an isolated antibody, (or its antigen binding fragment) that
CC   binds to the above polypeptide, a hybridoma that produces the above
CC   monoclonal antibody, a pharmaceutical composition comprising the above
CC   antibody and a pharmaceutical excipient, a kit for detecting cancer
CC   cells(comprising the antibody cited above, methods for diagnosing cancer
CC   or for detecting the presence or absence of cancer cells in an
CC   individual, a method for inhibiting growth of cancer cells in an
CC   individual, a method for delivering a therapeutic agent to cancer cells
CC   in an individual, an electronic library comprising the above
CC   polynucleotide or polypeptide (or their fragments), methods of screening
CC   for anticancer activity or for a bioactive agent capable of modulating
CC   the activity of a CA protein (CAP), methods for detecting cancer
CC   associated with expression of a polypeptide in a test cell sample, a
CC   method for treating cancers and a method for inhibiting the expression of
CC   CA gene in a cell. The composition and methods are useful for detecting,
CC   diagnosing, preventing and treating cancers, especially lymphoma and
CC   leukaemia. These may also be used in screening for agents that modulate
CC   cancer. The present sequence is a human CAP genomic sequence. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 658; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
```

```
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   New isolated cancer-associated polynucleotides and polypeptides useful
PT   for diagnosing, preventing or treating cancers, especially lymphoma and
PT   leukemia, or in screening for agents that modulate cancer.
XX
PS   claim 16; seqid 109; 310pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
CC   in the specification, or its complement. The nucleic acids encode cancer-
CC   associated proteins. Also included are an expression vector comprising
CC   the isolated nucleic acid cited above, a host cell comprising the above
CC   recombinant nucleic acid or expression vector, a microarray for detecting
CC   a cancer-associated (CA) nucleic acid comprising at least one probe
CC   comprising at least 10 contiguous nucleotides of any of the above-
CC   mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC   an open reading frame of a CA sequence selected from any of the 95
CC   polynucleotide sequences as mentioned in the specification, or its
CC   complement), an isolated antibody, (or its antigen binding fragment) that
CC   binds to the above polypeptide, a hybridoma that produces the above
CC   monoclonal antibody, a pharmaceutical composition comprising the above
CC   antibody and a pharmaceutical excipient, a kit for detecting cancer
```

```
CC   cells(comprising the antibody cited above, methods for diagnosing cancer
CC   or for detecting the presence or absence of cancer cells in an
CC   individual, a method for inhibiting growth of cancer cells in an
CC   individual, a method for delivering a therapeutic agent to cancer cells
CC   in an individual, an electronic library comprising the above
CC   polynucleotide or polypeptide (or their fragments), methods of screening
CC   for anticancer activity or for a bioactive agent capable of modulating
CC   the activity of a CA protein (CAP), methods for detecting cancer
CC   associated with expression of a polypeptide in a test cell sample, a
CC   method for treating cancers and a method for inhibiting the expression of
CC   CA gene in a cell. The composition and methods are useful for detecting,
CC   diagnosing, preventing and treating cancers, especially lymphoma and
CC   leukaemia. These may also be used in screening for agents that modulate
CC   cancer. The present sequence is a human CAP genomic sequence. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT Polynucleotides encoding digestive system antigens, useful for
PT diagnosing, treating, preventing and/or prognozing disorders of the
PT digestive system, particularly cancer and cancer metastases.
XX
PS Disclosure; SEQ ID NO 4100; 986pp; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a genomic DNA fragment
CC encoding a digestive system antigen of the invention

PT   New recombinant nucleic acid comprising a nucleotide sequence of any of
PT   the carcinoma-associated (CA) genes, useful for screening for drug
PT   candidates for diagnosing or treating carcinomas.
XX
PS   Claim 1; SEQ ID NO 178; 983pp; English.
XX
CC   The invention relates to a recombinant nucleic acid comprising a
CC   nucleotide sequence selected from any of the fully defined carcinoma-
CC   associated (CA) genes from the 50 tables given in the specification. The
CC   CA proteins are secreted, transmembrane or intracellular proteins. The
CC   recombinant nucleic acids are useful for screening for drug candidates
CC   for diagnosing or treating carcinomas. Sequences given in ADC85215-
CC   ADC85514 represent CA genes of the invention.

PT New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
XX
PS Claim 1; SEQ ID NO 1430; 245pp; English.

XX
CC The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a biochip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukaemia) or a propensity to carcinoma by determination of the sequence
CC of a CA gene, or by determination of CA gene expression in particular
CC tissues. CA nucleic acids, proteins and antibodies are also useful as
CC therapeutic agents and in screening and evaluating drug candidates. The
CC present sequence represents a specifically claimed human CA nucleic acid
CC sequence of the invention. Note: The complete sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT New recombinant nucleic acid, useful for treating carcinomas, lymphomas,
PT cancers, neoplasm, adenocarcinoma, or sarcomas.
XX
PS Claim 1; SEQ ID NO 478; 2304pp; English.
XX
CC The invention relates to a novel recombinant nucleic acid comprising a
CC nucleotide sequence selected from any of the 660 sequences fully defined
CC in the specification. A polynucleotide of the invention has cytostatic
CC activity, and may have a use in gene therapy, or in a vaccine. The
CC recombinant nucleic acids and polypeptides are useful for treating
CC carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and
CC sarcomas. The present sequence represents a human gene of the invention.

PT New carcinoma associated gene or protein, useful for preparing a
PT composition for diagnosing or treating carcinoma e.g., leukemia or
PT lymphoma.
XX
PS Claim 1; SEQ ID NO 178; 29pp; English.
XX
CC The invention relates to new recombinant nucleic acids. The invention
CC also relates to a host cell comprising a recombinant nucleic acid or
CC expression vector, an expression vector comprising a recombinant nucleic
CC acid, a recombinant protein, a method of screening for drug candidates, a
CC method of screening for a bioactive agent capable of binding to a
CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a
CC method of screening for a bioactive agent capable of modulating the
CC activity of a CAP, a method of evaluating the effect of a candidate
CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting
CC the activity of a CAP, a method of treating carcinomas, a method of
CC neutralising the effect of a CAP and a method of diagnosing carcinoma or
CC propensity to carcinoma. A method of evaluating the effect of a candidate
CC carcinoma drug comprises administering the drug to a patient, removing a
CC cell sample from the patient and determining alterations in the
CC expression or activation of a gene comprising the nucleotide sequence. A
CC method of diagnosing carcinoma comprises determining the expression of
CC one or more genes comprising the nucleic acid sequence in a first tissue
CC type of a first individual and comparing the expression of the gene from
CC a second normal tissue type from the first individual or a second
CC unaffected individual, where a difference in the expression indicates
CC that the first individual has carcinoma. A method of inhibiting the
CC activity of a CAP comprises binding an inhibitor to the CAP. Treating
CC carcinomas comprises administering to a patient an inhibitor of CAP.
CC Neutralising the effect of a CAP comprises contacting an agent specific
CC for the CAP. The polypeptide specifically binds to the protein encoded by
CC the nucleic acid. It comprises an antibody that specifically binds to the
CC protein encoded by the nucleic acid. The nucleic acids are useful for
CC preparing a composition for diagnosing or treating carcinoma e.g.,
CC leukaemia or lymphoma. This sequence represents a human carcinoma
CC associated (CA) nucleic acid of the invention. Note: The sequence data
CC for this patent did not form part of the printed specification but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html.

PT Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
PS Claim 1; SEQ ID NO 2444; 44pp; English.
XX
CC The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC tumour

PT   Isolated nucleic acid molecule encoding a reproductive system antigen is
PT   used in preventing, treating or ameliorating a medical condition.
XX
PS   Disclosure; SEQ ID NO 7972; 1297pp + Sequence Listing; English.
XX
CC   The present invention provides the protein and coding sequences of a
CC   number of human reproductive system related antigens. These can be used
CC   in the prevention and treatment of reproductive system disorders,
CC   including cancer. The present sequence is a genomic sequence encoding a
CC   protein of the invention

PT   Novel isolated polynucleotide encoding human or mouse high affinity
PT   choline transporter polypeptide, useful in gene therapy to increase
PT   cholinergic function in a cell of a patient suffering from Alzheimer's
PT   disease.
XX
PS   Example 1; SEQ ID NO 13; 74pp; English.
XX
CC   The present invention relates to the isolation of polynucleotide
CC   sequences encoding human and mouse high-affinity choline transporter
CC   (hCHT and mCHT respectively), and the proteins they encode. The gene
CC   encoding hCHT is located on chromosome 2q12. The polynucleotide sequence
CC   encoding hCHT, is useful for expressing hCHT recombinantly. The hCHT
CC   polynucleotide sequence when delivered to a cell, increases cholinergic
CC   function in the cell that is in a patient having Parkinson's disease,
CC   Huntington's disease, Alzheimer's disease, schizophrenia, dysautonomia or
CC   myasthenia gravis. The hCHT antibody is useful for controlling
CC   transporter CHT proteins to the brain, and for treating the above
CC   mentioned diseases. The antibody is also useful for diagnosing the above
CC   mentioned disorders and to detect the influence of cholinergic
CC   signalling. The present sequence represents a bacterial artificial
CC   chromosome (BAC) sequence containing hCHT DNA. Note: The sequence data
CC   for this patent was obtained in electronic format directly from the USPTO
CC   web site at seqdata.uspto.gov.

PS   Example 1; SEQ ID NO 13; 73pp; English.
XX
CC   The present invention provides polynucleotides encoding novel high
CC   affinity choline transporters (CHTs), methods for their use in screening
CC   and therapy. The invention is useful for treating neuromuscular
CC   disorders, autonomic or central nervous system disorders such as
CC   Parkinsons disease, Huntingtons disease, Alzheimers disease,
CC   schizophrenia, dysautonomia and myasthenia gravis (MG). The invention is
CC   also useful in gene therapy. The present sequence is human BAC (bacterial
CC   artificial chromosome) clone RP11-114017 on chromosome 10 genomic DNA.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from the US
CC   patent office at seqdata.uspto.gov/sequence.html?DocID=US20040248838.

PT   Use of genes and their expression profiles associated with osteoblast
PT   differentiation for screening modulators bone formation, for diagnosing
PT   or treating e.g. osteoporosis, or as markers for the differentiation
PT   process.
XX
PS   Claim 1; SEQ ID NO 86; 78pp + Sequence Listing; English.
XX
CC   The invention relates to genes and their expression profiles are used
CC   for: (a) screening modulators of precursor stem cell differentiation into
CC   osteoblasts, or bone tissue deposition; (b) diagnosing abnormal
CC   deposition of bone tissue, abnormal rate of osteoblast formation or
CC   osteoporosis; or (c) treating or monitoring treatment of the conditions
CC   cited in (b), or monitoring the progression of bone tissue deposition.
CC   Specific conditions include postmenopausal osteoporosis, glucocorticoid
CC   osteoporosis or male osteoporosis, osteopenia, osteodystrophy, drug-
CC   induced abnormalities in bone formation or bone loss, conditions that
CC   involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis),
CC   skeletal disease linked to breast cancer, mastocytosis, Fanconi syndrome
CC   or fibrous dysplasia. The present sequence is that of an osteoblast
CC   differentiation associated cDNA marker of the invention. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT New antisense compound targeted to a nucleic acid molecule encoding
PT glucocorticoid receptor, useful for modulating the expression of
PT glucocorticoid receptor, or for treating or diagnosing, e.g. diabetes or
PT obesity.
XX
PS Example 12; SEQ ID NO 25; 129pp; English.
XX
CC The invention relates to an antisense compound 13-80 nucleobases in
CC length targeted to a nucleic acid molecule encoding glucocorticoid
CC receptor, where the compound is complementary to the nucleic acid
CC molecule encoding glucocorticoid receptor, and where the compound
CC inhibits the expression of glucocorticoid receptor mRNA. Also described:
CC (1) a method of inhibiting the expression of glucocorticoid receptor in a
CC cell or tissue; (2) a method of treating an animal having a disease or
CC condition associated with glucocorticoid receptor; (3) a method of
CC decreasing blood glucose levels in an animal; and (4) a method of
CC preventing or delaying the onset of an increase in blood lipid levels in
CC an animal. The compounds, compositions, and methods are useful for
CC modulating the expression of glucocorticoid receptor. They are also
CC useful for the diagnosis and treatment of diseases and conditions
CC associated with glucocorticoid receptor, e.g. diabetes (Type 2), obesity,
CC metabolic syndrome X, hyperglycemia, or hyperlipidemia. The present
CC sequence represents a human glucocorticoid receptor nucleotide sequence,
CC which is used in an example from the present invention.

PT   New recombinant nucleic acid encoding carcinoma associated protein,
PT   useful for preparing compositions for treating carcinomas.
XX
PS   Claim 1; SEQ ID NO 1472; 245pp; English.
XX
CC   The invention relates to recombinant carcinoma associated (CA) nucleic
CC   acid sequences from mouse and human (ADA01482-ADA03094), and to
CC   recombinant carcinoma associated proteins (CAP) encoded by them. The
CC   invention also encompasses expression vectors and host cells comprising a
CC   CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC   binds to the protein, and a biochip comprising CA nucleic acid or
CC   fragments thereof. The sequences of the invention were identified using
CC   oncogenic retroviruses, which insert into the genome of the host organism
CC   at random. Many of these do not carry transduced host oncogenes or
CC   pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC   direct consequence of the effects of proviral integration into host
```

```
CC   protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC   carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC   leukaemia) or a propensity to carcinoma by determination of the sequence
CC   of a CA gene, or by determination of CA gene expression in particular
CC   tissues. CA nucleic acids, proteins and antibodies are also useful as
CC   therapeutic agents and in screening and evaluating drug candidates. The
CC   present sequence represents a specifically claimed human CA nucleic acid
CC   sequence of the invention. Note: The complete sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   New recombinant nucleic acid, useful for treating carcinomas, lymphomas,
PT   cancers, neoplasm, adenocarcinoma, or sarcomas.
XX
PS   Claim 1; SEQ ID NO 520; 2304pp; English.
XX
CC   The invention relates to a novel recombinant nucleic acid comprising a
CC   nucleotide sequence selected from any of the 660 sequences fully defined
CC   in the specification. A polynucleotide of the invention has cytostatic
CC   activity, and may have a use in gene therapy, or in a vaccine. The
CC   recombinant nucleic acids and polypeptides are useful for treating
CC   carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and
CC   sarcomas. The present sequence represents a human gene of the invention.

PT lymphoma.
XX
PS Claim 1; SEQ ID NO 220; 29pp; English.
XX
CC The invention relates to new recombinant nucleic acids. The invention
CC also relates to a host cell comprising a recombinant nucleic acid or
CC expression vector, an expression vector comprising a recombinant nucleic
CC acid, a recombinant protein, a method of screening for drug candidates, a
CC method of screening for a bioactive agent capable of binding to a
CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a
CC method of screening for a bioactive agent capable of modulating the
CC activity of a CAP, a method of evaluating the effect of a candidate
CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting
CC the activity of a CAP, a method of treating carcinomas, a method of
CC neutralising the effect of a CAP and a method of diagnosing carcinoma or
CC propensity to carcinoma. A method of evaluating the effect of a candidate
CC carcinoma drug comprises administering the drug to a patient, removing a
CC cell sample from the patient and determining alterations in the
CC expression or activation of a gene comprising the nucleotide sequence. A
CC method of diagnosing carcinoma comprises determining the expression of
CC one or more genes comprising the nucleic acid sequence in a first tissue
CC type of a first individual and comparing the expression of the gene from
CC a second normal tissue type from the first individual or a second
CC unaffected individual, where a difference in the expression indicates
CC that the first individual has carcinoma. A method of inhibiting the
CC activity of a CAP comprises binding an inhibitor to the CAP. Treating
CC carcinomas comprises administering to a patient an inhibitor of CAP.
CC Neutralising the effect of a CAP comprises contacting an agent specific
CC for the CAP. The polypeptide specifically binds to the protein encoded by
CC the nucleic acid. It comprises an antibody that specifically binds to the
CC protein encoded by the nucleic acid. The nucleic acids are useful for
CC preparing a composition for diagnosing or treating carcinoma e.g.,
CC leukaemia or lymphoma. This sequence represents a human carcinoma
CC associated (CA) nucleic acid of the invention. Note: The sequence data
CC for this patent did not form part of the printed specification but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html.

PT useful to diagnose and monitor breast, prostate, colon, lung, liver and
PT ovarian cancer.
XX
PS Claim 17; SEQ ID NO 38; 32pp; English.
XX
CC The present invention relates to a method of detecting DNA methylation of
CC a CpG dinucleotide rich region of a nucleic acid. The method comprises
CC hybridisation by differential methylation hybridisation (DMH) in which
CC the nucleic acid is digested into fragments in which CpG islands are
CC preserved, attaching the fragments to linker primers, digesting the
CC linker primer products to digest unmethylated CpG sequences, amplifying
CC and labelling the remaining linker primer products and detecting labelled
CC amplicons. Also disclosed is a screening array comprising nucleic acid
CC fragments fixed to a solid support where each fragment is a CpG
CC dinucleotide rich fragment comprising at least 200 nucleotides of which
CC at least 50% are guanine and cytosine. Nucleic acid probes prepared from
CC a cell sample are used to screen CpG dinucleotide rich fragments fixed
CC onto a screening array. The invention is useful to diagnose and monitor
CC prognosis of a disease associated with aberrant DNA methylation,
CC particularly breast, prostate, colon, lung, liver or ovarian cancer,
CC especially breast cancer. The present sequence represents the site of
CC hypermethylation in human breast cancer at a CpG island locus (HBC,
CC hypermethylation in breast cancer).

RESULT 1
US-09-078-294-3
; Sequence 3, Application US/09078294
; Patent No. 6265211
; GENERAL INFORMATION:
; APPLICANT: Choo, Kong-Hong Andy
; APPLICANT: Du Sart, Desiree
; APPLICANT: Cancilla, Michael R.
; TITLE OF INVENTION: A NOVEL NUCLEIC ACID MOLECULE
; FILE REFERENCE: Davies Col
; CURRENT APPLICATION NUMBER: US/09/078,294
; CURRENT FILING DATE: 1998-05-13
; NUMBER OF SEQ ID NOS: 29
; SOFTWARE: PatentIn Ver. 2.0
; SEQ ID NO 3
; LENGTH: 80595
; TYPE: DNA
; ORGANISM: Nucleotide sequence of HC-contig
US-09-078-294-3

Query Match 100.0%; Score 2000; DB 3; Length 80595;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     /clone_lib="NCI_CGAP_DI0"
                     /note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a
                     modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     NCI_CGAP_DI0 is a cDNA library containing the following
                     tissue(s): A pool of Lung Focal Fibrosis. The library was
                     constructed according to Bonaldo, Lennon and Soares,
                     Genome Research, 6:791-806, 1996. First strand cDNA
                     synthesis was primed with an oligo-dT primer containing a
                     Not I site. Double stranded cDNA was ligated to an EcoR I
                     adaptor, digested with Not I, and cloned directionally
                     into pT7T3-Pac vector. The oligonucleotide used to prime
                     the synthesis of first-strand cDNA contains a library tag
                     sequence that is located between the Not I site and the
                     (dT)18 tail. The sequence tag for this library is
                     ATACGCGGTC.
                     TAG_TISSUE=lung with fibrosis
                     TAG_LIB=UI-H-DI0
                     TAG_SEQ=ATACGCGGTC"

                     /clone_lib="UI-E-DW0"
                     /note="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a
                     modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     UI-E-DW0 is a cDNA library containing the following
                     tissue(s): lens. The library was constructed according to
                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. First strand cDNA synthesis was primed with an
                     oligo-dT primer containing a Not I site. Double stranded
                     cDNA was ligated to an EcoR I adaptor, digested with Not
                     I, and cloned directionally into pT7T3-Pac vector. The
                     oligonucleotide used to prime the synthesis of
                     first-strand cDNA contains a library tag sequence that is
                     located between the Not I site and the (dT)18 tail. The
                     sequence tag for this library is CGATTAGCGA. This library
                     was created for the program, Gene Discovery in the Visual
                     System, supported by National Eye Institute (NEI).

/note="Organ: Bone; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI_CGAP_DF0 is a cDNA library containing the following tissue(s): Subchondral Bone. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GTTAAGCGTC.

                     bacterial alkaline phosphatase (BAP) and then decapped
                     with tabacco acid pyrophosphatase (TAP). The decapped
```

intact mRNA was ligated with DNA-RNA linker including EcoRI site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

Clones are derived from the human BAC library RPCI-11. For BAC library availability, please contact Pieter de Jong (pieter@dejong.med.buffalo.edu). Clones may be purchased from BACPAC Resources (http://bacpac.med.buffalo.edu/ordering) or from Research Genet cs (info@resgen.com). BAC end search page: http://www.tigr.org/tdb/humgen/bac_end_search/bac_end_search.html.
Seq primer: T7
Class: BAC ends.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AL355340
LOCUS       AL355340              112442 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-383C6 on chromosome 10 Contains
            the TRUB1 gene for TruB pseudouridine (psi) synthase homolog 1 (E.
            coli), a novel gene and a CpG island, complete sequence.
ACCESSION   AL355340
VERSION     AL355340.17  GI:21436504
KEYWORDS    HTG; TRUB1.
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens

            Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
            Hominidae; Homo.
REFERENCE   1  (bases 1 to 112442)
  AUTHORS   Leongamornlert,D.
  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jun 17, 2002 this sequence version replaced gi:16416169.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            RP11-383C6 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

            -------------- Project Information
            Center project name: bA203A7
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Sequencing vector: plasmid; L08752; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Consensus quality: 174005 bases at least Q40
            Consensus quality: 174806 bases at least Q30
            Consensus quality: 175273 bases at least Q20
            Insert size: 175632; sum-of-contigs
            Insert size: 155595; 14.1% error; agarose-fp
            Quality coverage: 6.85x in Q20 bases; sum-of-contigs Quality
            coverage: 8.13x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    23099: contig of 23099 bp in length
            *    23100    23199: gap of 100 bp
            *    23200    38049: contig of 14850 bp in length
            *    38050    38149: gap of 100 bp
            *    38150    65430: contig of 27281 bp in length
            *    65431    65530: gap of 100 bp
            *    65531   100606: contig of 35076 bp in length
            *   100607   100706: gap of 100 bp
            *   100707   156710: contig of 56004 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (12-OCT-2000) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Mar 25, 2001 this sequence version replaced gi:10799449.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research
                Center code: WIBR
                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L11327
                Center clone name: 314_C_19
            --------------.
            * NOTE: This record contains 85 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1      720: contig of 720 bp in length
            *      721      820: gap of 100 bp

                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L28557
                Center clone name: 933_I_10
            -------------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 125101 bases at least Q40
                Consensus quality: 128385 bases at least Q30
                Consensus quality: 129654 bases at least Q20
                Insert size: 206000; agarose-fp
                Insert size: 131015; sum-of-contigs
                Quality coverage: 15.8 in Q20 bases; agarose-fp
                Quality coverage: 24.8 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 24 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
```

AL353716/c
LOCUS       AL353716               98340 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-501I18 on chromosome 6 Contains
            the TBCC gene for tubulin-specific chaperone c, part of a novel
            gene, part of the gene for a novel protein (KIAA0240) and CpG
            islands, complete sequence.
ACCESSION   AL353716
VERSION     AL353716.18  GI:11967504
KEYWORDS    HTG; KIAA0240; TBCC; tubulin.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Dec 22, 2000 this sequence version replaced gi:11611339.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-501I18 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6

            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
```

```
          chemistry or covered by high quality data (i.e., phred quality >=
          30); an attempt was made to resolve all sequencing problems, such
          as compressions and repeats; all regions were covered by at least
          one subclone; and the assembly was confirmed by restriction digest,
          except on the rare occasion of the clone being a YAC.

COMMENT     On Nov 7, 2001 this sequence version replaced gi:13518242.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0083N02
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-485M18; the clone sequenced
            to the right is RP11-122C15.  Actual start of this clone is at base
            position 1 of RP11-83N2; actual end is at base position 165007 of
            RP11-83N2.

            The region from base position 29896 to 29936 is only covered by
            data from AC079400.

              Web site: http://hgp.gsc.riken.go.jp/
              Contact: hattori@gsc.riken.go.jp
            -------------- Project Information
              Center project name: HumDraft11
              Center clone name: RP11-148E9
            -------------- Summary Statistics
              Sequencing vector: PCR products; 100% of reads
              Chemistry: Dye-terminator ET-amersham; 100% of reads
              Assembly program: Phrap; version 0.990329
              Consensus quality: 164750 bases at least Q40
              Consensus quality: 168344 bases at least Q30
              Consensus quality: 169784 bases at least Q20
              Insert size: 170496; sum-of-contigs
              Quality coverage: 5.98x in Q20 bases; sum-of-contigs
            --------------.
            NOTE: This is a 'working draft' sequence. It currently consists of
            19 contigs. The true order of the pieces is not known and their
            order in this sequence record is arbitrary. Gaps between the
            contigs are represented as runs N, but the exact sizes of the gaps
            are unknown. This record will be updated with the finished sequence
            as soon as it is available and the accession number will be
            preserved
                  1     37986 contig of  37986 bp in length
              38087     62025 contig of  23939 bp in length
              62126     73587 contig of  11462 bp in length
              73688     84480 contig of  10793 bp in length
              84581     96212 contig of  11632 bp in length
              96313    105504 contig of   9192 bp in length
             105605    112728 contig of   7124 bp in length
             112829    120174 contig of   7346 bp in length
             120275    129224 contig of   8950 bp in length

COMMENT     E. coli transposon insertion:The present data does not contain E.
            coli transposon sequences which integrated in the
            original/previous sequences.  We determined the boundary between
            the insertion and genomic sequences experimentally, removed the
            insertion sequences, reconstituted the present data. The sequencing
            project is supported by Japan Science Technology Corporation (JST)
            and The Institute of Physical and Chemical Research (RIKEN).

  TITLE     Direct Submission
  JOURNAL   Submitted (01-MAY-2002) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On May 1, 2002 this sequence version replaced gi:19033639.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research

                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L23190
                Center clone name: 2116_N_17
            --------------

            Only the first 164.9 kilobases of this clone are being submitted.
            The remainder overlaps accession number AC100840 [WICGR project
            L21571].

                Center project name: L9836
                Center clone name: 185_A_14
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 91% of reads
                Sequencing vector: Plasmid; n/a; 9% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 162617 bases at least Q40
                Consensus quality: 165848 bases at least Q30
                Consensus quality: 167104 bases at least Q20
                Insert size: 170000; agarose-fp
                Insert size: 167651; sum-of-contigs
                Quality coverage: 5.4 in Q20 bases; agarose-fp
                Quality coverage: 5.5 in Q20 ba.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 12 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     5645: contig of 5645 bp in length
            *     5646     5745: gap of 100 bp
            *     5746     6917: contig of 1172 bp in length
            *     6918     7017: gap of 100 bp
            *     7018     8320: contig of 1303 bp in length
            *     8321     8420: gap of 100 bp
            *     8421    10553: contig of 2133 bp in length
            *    10554    10653: gap of 100 bp
            *    10654    13543: contig of 2890 bp in length

COMMENT     On May 23, 2002 this sequence version replaced gi:14192901.
            ------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            ------------- Project Information
                 Center project name: cea
                 Center clone name: 097L19

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            ------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 174154 bases at least Q40
                 Consensus quality: 174933 bases at least Q30
                 Consensus quality: 175303 bases at least Q20
                 Insert size: 166000; agarose-fp
                 Insert size: 175452; sum-of-contigs
                 Quality coverage: 14.26x in Q20 bases; agarose-fp
                 Quality coverage: 13.49x in Q20 bases; sum-of-contigs
            -------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1    68459: contig of 68459 bp in length
            *   68460    68559: gap of unknown length
            *   68560   152280: contig of 83721 bp in length
            *  152281   152380: gap of unknown length
            *  152381   166826: contig of 14446 bp in length
            *  166827   166926: gap of unknown length
            *  166927   175752: contig of 8826 bp in length.

                Contact: submissions@watson.wustl.edu
            ------------- Summary Statistics
                Center project name: C_PT097N16
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA
            was isolated from white blood cells obtained from a male chimpanzee
            (Pan troglodytes,'Clint', Yerkes #C0471; birthdate: 6-6-80). The
```

clone and detailed information can be obtained from ResGen (http://www.resgen.com) or Pieter de Jong and co-workers at http://www.bacpac.chori.org.

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

  TITLE     Direct Submission
  JOURNAL   Submitted (30-APR-2000) DNA Sequencing and Technology Center,
            Stanford University, 855 California Avenue, Palo Alto, CA 94304,
            USA
COMMENT     On Aug 27, 2000 this sequence version replaced gi:8567772.
            -------------- Genome Center
                 Center: Stanford DNA Sequencing and Technology Development
            Center
                 Center code: SDSTDC
                 Web site: http://sequence-www.stanford.edu/group/human/
                 Contact: hum-info@sequence.stanford.edu
            -------------- Project Information
                 Center project name: 887
                 Center clone name: RP11-290B2
            -------------- Summary Statistics
                 Sequencing Vector: M13mp18; X02513
                 Chemistry: Dye-primer; 0% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 205371 bases at least Q40
                 Consensus quality: 208312 bases at least Q30
                 Consensus quality: 209125 bases at least Q20
                 Insert size: 197597; agarose-fp
                 Insert size: 212532; sum-of-contigs
                 Quality coverage:  8.3x in Q20 bases; agarose-fp
                 Quality coverage:  7.7x in Q20 bases; sum-of-contigs.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 10 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
```

```
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1608: contig of 1608 bp in length
            *     1609     1708: gap of unknown length
            *     1709     5437: contig of 3729 bp in length
            *     5438     5537: gap of unknown length
            *     5538     9381: contig of 3844 bp in length
            *     9382     9481: gap of unknown length
            *     9482    20244: contig of 10763 bp in length
            *    20245    20344: gap of unknown length
            *    20345    33266: contig of 12922 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jun 10, 2002 this sequence version replaced gi:9864396.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP5-1056L3 is from the library RPCI-5 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2
            ------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            -------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

TITLE Direct Submission
JOURNAL Submitted (09-APR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Mar 23, 2002 this sequence version replaced gi:18449819.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jun 1, 2002 this sequence version replaced gi:20334525.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

            -------------- Project Information
                Center project name: L8179
                Center clone name: 367_K_14
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 166432 bases at least Q40
                Consensus quality: 174531 bases at least Q30
                Consensus quality: 177652 bases at least Q20
                Insert size: 185000; agarose-fp
                Insert size: 179305; sum-of-contigs
                Quality coverage: 3.5 in Q20 bases; agarose-fp
                Quality coverage: 3.7 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 23 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1123: contig of 1123 bp in length
            *     1124     1223: gap of 100 bp
            *     1224     2181: contig of 958 bp in length
            *     2182     2281: gap of 100 bp
            *     2282     4712: contig of 2431 bp in length
            *     4713     4812: gap of 100 bp
```

            ------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 32 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1180: contig of 1180 bp in length
            *     1181     1280: gap of unknown length
            *     1281     2540: contig of 1260 bp in length
            *     2541     2640: gap of unknown length
            *     2641     3939: contig of 1299 bp in length
            *     3940     4039: gap of unknown length
            *     4040     5503: contig of 1464 bp in length
            *     5504     5603: gap of unknown length
            *     5604     7410: contig of 1807 bp in length

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:

            -------------- Summary Statistics
                Center project name: C_AB0490K17

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The CHORI-251 Chimpanzee BAC library has been constructed at the
            Children's Hospital Oakland Research Institute, BACPAC Resources,
            by Dr. Baoli Zhu.  DNA was isolated from white blood cells obtained
            from a male chimpanzee (Pan troglodytes, 'Clint', Yerkes #C0471;
            birthdate:6-6-80).  The clone and detailed information can be
            obtained from Pieter de Jong and co-workers at
            http://www.bacpac.chori.org.

            This sequence is the entire insert of the clone.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New isolated nucleic acid comprising neocentromere sequences from
PT eukaryotic chromosome - used to produce replicable, segregating
PT artificial chromosomes that can carry large amounts of DNA for gene
PT therapy.
XX
PS Claim 8; Fig 6; 540pp; English.
XX
CC The present sequence represents the HC-contig derived from normal human
CC chromosome 10, 10q25.2 region. This region can be naturally mutated to
CC produce an unusual chromosomal marker referred to as mardel(10). The
CC mardel(10) marker is mitotically stable and contains a functional
CC neocentromere at a location regarded as non-centromeric. This
CC neocentromere maps to q25.2 on chromosome 10. The specification describes
CC nucleic acid sequences derived from a eukaryotic chromosome, including a
CC neocentromere or its functional derivative or hybrid, that are able, in a
CC compatible cell, of replicating, acting as extra-chromosomal element and
CC segregating during cell division. The sequences can be used to construct
CC artificial chromosomes for use in gene therapy comprising a replicable,
CC segregating nucleic acid that confers a specific phenotype on cells.
CC Human artificial chromosomes can propagate in human cells and carry large
CC amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal,
CC they are not mutagenic. The artificial chromosomes are also useful for
CC generation of transgenic plants and animals, in production of proteins
CC and to make diagnostic reagents, e.g. for expression of cytokines,
CC receptors and growth factors, or to increase the copy number of a gene in
CC a cell. The constructs may also be used for functional and structural
CC analysis of chromosomes

PT New isolated nucleic acid comprising neocentromere sequences from
PT eukaryotic chromosome - used to produce replicable, segregating
PT artificial chromosomes that can carry large amounts of DNA for gene
PT therapy.
XX
PS Claim 9; Fig 16A; 540pp; English.
XX
CC The present sequence represents the NC-contig derived from a mutated
CC human chromosome 10, 10q25.2 region. The sequence contains an unusual
CC chromosomal marker referred to as mardel(10). The mardel(10) marker is
CC mitotically stable and contains a functional neocentromere at a location
CC regarded as non-centromeric. This neocentromere maps to q25.2 on
CC chromosome 10. The specification describes nucleic acid sequences derived
CC from a eukaryotic chromosome, including a neocentromere or its functional
CC derivative or hybrid, that are able, in a compatible cell, of
CC replicating, acting as extra-chromosomal element and segregating during
CC cell division. The sequences can be used to construct artificial
CC chromosomes for use in gene therapy comprising a replicable, segregating
CC nucleic acid that confers a specific phenotype on cells. Human artificial
CC chromosomes can propagate in human cells and carry large amounts of DNA
CC (e.g. therapeutic genes), and, being extra-chromosomal, they are not
CC mutagenic. The artificial chromosomes are also useful for generation of
CC transgenic plants and animals, in production of proteins and to make
CC diagnostic reagents, e.g. for expression of cytokines, receptors and
CC growth factors, or to increase the copy number of a gene in a cell. The
CC constructs may also be used for functional and structural analysis of
CC chromosomes

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 52; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   Determining whether a subject has, or is at risk of developing, an
PT   abnormally low high density lipoprotein-C (HDL-C) level comprises
PT   detecting an allelic variant of a polymorphic region from any of a set of
PT   27 genes.
XX
PS   Disclosure; SEQ ID NO 47; 37pp; English.
XX
CC   The invention relates to determining whether a subject has, or is at risk
CC   of developing, an abnormally low high density lipoprotein-C (HDL-C) level
CC   comprises determining whether the subject has an allelic variant of a
CC   polymorphic region from any of 27 genes (alleles listed in Table 5 of the
CC   specification). Also included are determining whether a male subject has,
CC   or is at risk of developing, an abnormally low HDL-C level, comprising
CC   determining whether the male subject has an allelic variant of a
CC   polymorphic region listed in Table 5 which is associated with abnormally
CC   low HDL-C levels in males, and determining whether a female subject has,
CC   or is at risk of developing, an abnormally low HDL-C level, comprising
CC   determining whether the female subject has an allelic variant of a
CC   polymorphic region listed in Table 5 which is associated with abnormally
CC   low HDL-C levels in females. The allelic variant in determining whether a
CC   subject has, or is at risk of developing, an abnormally low HDL-C level
CC   is APOA 1 CC, CD14 1 CT, COL5A2 1 GG, EDNRB 1 AG or AA, FABP3 1 CT, GBE1
CC   1 AG or GG, LIPC 5 AA, MTHFR 1 CC, VWF 2 GG, or their complements. The
CC   allelic variant in determining whether a male subject has, or is at risk
CC   of developing, an abnormally low HDL-C level, LRP1 3 CC or CT, PAI2 4 GG,
CC   or PPARG 1 CG, or their complements. The allelic variants are also COL5A2
CC   1 GG, CD14 1 CT or CC, and FABP3 1 CT, in combination, or their
CC   complements. The methods are useful for diagnosing (a predisposition to)
CC   abnormally low levels of low high density lipoprotein-C (HDL-C) in a
CC   subject, The methods are useful in diagnosing (a predisposition to) or
CC   prognosticating diseases and disorders associated with abnormal lipid
CC   levels such as vascular and metabolic diseases, e.g., coronary artery
CC   disease. The present sequence is a human gene containing a SNP (single
CC   nucleotide polymorphism associated with low high density lipoprotein-C
CC   (HDL-C) levels.

XX
PT   Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating nervous system cancers
PT   and metastases.
XX
PS   Disclosure; SEQ ID NO 12963; 1701pp + Sequence Listing; English.
XX
CC   The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC   (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC   medical conditions e.g. by protein or gene therapy. The genes are
CC   isolated from a range of human tissues disclosed in the specification.
CC   The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC   the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC   ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC   breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC   disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC   anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC   multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC   cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC   ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC   infectious diseases such as viral, bacterial, fungal and parasitic
CC   infections. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 25015; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PA (HUMA-) HUMAN GENOME SCI INC.
XX
PI Rosen CA, Barash SC, Ruben SM;
XX
DR WPI; 2001-465570/50.
XX
PT Isolated nucleic acid molecule encoding a reproductive system antigen is
PT used in preventing, treating or ameliorating a medical condition.
XX
PS Disclosure; SEQ ID NO 9685; 1297pp + Sequence Listing; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human reproductive system related antigens. These can be used
CC in the prevention and treatment of reproductive system disorders,
CC including cancer. The present sequence is a genomic sequence encoding a
CC protein of the invention

XX
PT New isolated ovarian and/or breast cancer related nucleic acids and
PT polypeptides, useful for diagnosing, treating and/or preventing human
PT diseases and disorders, particularly ovarian and/or breast cancer.
XX
PS Disclosure; SEQ ID NO 932; 577pp + Sequence Listing; English.
XX
CC The invention relates to novel genes (ABA07454-ABA08224) and proteins
CC (ABB10743-ABB10980) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New antisense oligonucleotides of 8-80 nucleobases, useful for treating
PT cancer, diabetes, osteoporosis or various endocrine disorders.
XX
PS Example 13; SEQ ID NO 4; 155pp; English.
XX
CC The invention relates to an antisense oligonucleotide comprising 8-80
CC nucleobases in length targeted to the coding region of a nucleic acid
CC molecule encoding PPAR-delta (peroxisome proliferative activated receptor
CC delta), where the antisense compound inhibits the expression of the PPAR-
CC delta and has any of the 66 sequences of 20 amino acids fully defined in
CC the specification. Also included are a compound of 8-80 nucleobases in
CC length that specifically hybridises with at least an 8-nucleobase portion
CC of a preferred target region on a nucleic acid molecule encoding PPAR-
CC delta and a composition comprising the antisense oligonucleotide and a
CC carrier. The antisense oligonucleotide comprises at least one modified
CC internucleoside linkage (preferably a phosphorothioate linkage), at least
CC one sugar moiety (preferably 2'-O-methoxyethyl moiety) and at least one
CC modified nucleobase (which is a 5-methyl cytosine). The antisense
CC compounds are useful for treating cancer, osteoporosis, diabetes or
CC various endocrine disorders. The Human PPAR delta gene is located on
CC chromosome 6p21. The present sequence is a PPAR delta genomic sequence
CC used as a target for the antisense oligonucleotides of the invention.

PT New antisense oligonucleotide, having a sequence targeted to a nucleic
PT acid encoding PPAR-delta, useful for preparing a composition for treating
PT hyperproliferative disorder, e.g., cancer.
XX
PS Example 15; SEQ ID NO 4; 0pp; English.
XX
CC This invention describes novel antisense oligonucleotides targeted to a
CC nucleic acid encoding PPAR-delta, which specifically hybridise to and

```
CC   inhibit expression of PPAR-delta. The oligonucleotide specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on the
CC   nucleic acid molecule encoding the PPAR-delta and comprises at least one
CC   modified internucleoside linkage, which is a phosphorothioate linkage, at
CC   least one modified sugar moiety, which is a 2'-O-methoxyethyl sugar
CC   moiety or at least one modified nucleobase, which is a 5-methylcytosine.
CC   The antisense oligonucleotides are useful for preparing a composition for
CC   treating hyperproliferative disorders, e.g., cancer. The oligonucleotides
CC   of the invention have cytostatic activity and can be used for gene
CC   therapy.

PT   Diagnosing non-blood disease such as solid tumor, involves comparing
PT   differential expression profile of specific genes in peripheral blood
PT   sample of subject with reference expression profile of specific genes.
XX
PS   Disclosure; SEQ ID NO 322; 350pp; English.
XX
CC   The invention relate to a method of diagnosing (M1) non-blood disease
CC   such as solid tumor by providing peripheral blood sample of human having
CC   non-blood disease, and comparing an expression profile of specific genes
CC   in the peripheral blood sample to reference expression profile of the
CC   genes, where each of the genes is differentially expressed in peripheral
CC   blood mononuclear cells (PBMCs) of patients having the disease as
CC   compared to PBMCs of normal humans. The method is useful for diagnosing
CC   non-blood disease such as solid tumor. The solid tumor is chosen from
CC   renal cell carcinoma (RCC), prostate cancer and head/neck cancer. The
CC   peripheral blood sample comprises enriched PBMCs. The peripheral blood
CC   sample is a whole blood sample (claimed). (M1) is useful for identifying
CC   genes that are differentially expressed in peripheral blood samples
CC   isolated at different stages of progression, development or treatment of
CC   RCC and/or other solid tumors. This sequence corresponds to a gene that
CC   is differentially expressed and detected by the method of the invention.
CC   (Note: this sequence is not given as part of the printed specification
CC   but was obtained from WIPO in electronic format at
CC   ftp.wipo./pub/published_pct_sequences).

XX
PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS   Disclosure; SEQ ID NO 30489; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting the
CC   nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 23260; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT inflammatory bowel disease.
XX
PS Claim 2; SEQ ID NO 5; 338pp; English.
XX
CC The invention relates to an isolated nucleic acid or alternate splice
CC variant comprising a nucleotide sequence containing at least one of the
CC single nucleotide polymorphisms given in the specification, a nucleotide
CC sequence having at least 15 contiguous nucleotides of them, or
CC complements of them. The genes are ADAM19 (a disintegrin and
CC metalloprotease 19, also known as gene 845), NRG2 (neuroregulin 2, also
CC known as gene 847), endophilin 1 (also known as gene 874), endophilin 2
CC (also known as gene 803) and ADAMTS2 (a disintegrin and metalloprotease
CC with thrombospondin type1 motif 2, also known as gene 962). Also included
CC are a vector comprising the isolated nucleic acid (or alternate splice
CC variant), a host cell containing the vector, an isolated polypeptide
CC encoded by the novel nucleic acid (or alternate splice variant), an
CC antibody or antibody fragment that binds to the polypeptide,
CC pharmaceutical compositions (comprising the nucleic acid or alternate
CC splice variant, vector, polypeptide or antibody , and a carrier,
CC excipient or diluent), a kit for detecting a disintegrin and
CC metalloprotease (ADAM) gene nucleotide sequence (comprising the isolated
CC nucleic acid or alternate splice variant, antibody or antibody fragment,
CC and at least one component to detect the hybridisation of the variant or
CC the binding of the antibody to an ADAM gene amino acid sequence), a kit
CC for detecting an interactor gene amino acid sequence (comprising the
CC antibody or antibody fragment, and at least one component to detect the
CC binding of the antibody to the interactor gene amino acid sequence),
CC diagnosing an ADAM or interactor gene-associated disorder or a
CC respiratory disorder in a human subject, determining an ADAM or
CC interactor gene pharmacogenetic profile in a human subject, identifying
CC an orthologue of a human ADAM or interactor gene, treating an ADAM or
CC interactor gene-associated disorder (or a respiratory disorder) by
CC administering the pharmaceutical composition, a transgenic mouse (whose
CC genome comprises an introduced null mutation in an endogenous gene that
CC is orthologous to a human ADAM gene), making a homozygous transgenic
CC knockout mouse, forming a crystal of the isolated polypeptide, a cell
CC line comprising the isolated nucleic acid or alternate splice variant, a
CC biochip comprising the isolated nucleic acid or alternate splice variant,
CC an isolated nucleic acid probe or primer comprising at least 8 contiguous
CC nucleotides of the nucleic acid, an isolated antisense nucleic acid,
CC identifying an ADAM or interactor gene ligand and an isolated nucleic
CC acid variant of Gene 803, 845, 847, 874 or 962. The nucleic acid or
CC alternate splice variants, methods, kits and antibody/antibody fragment
CC are useful for diagnosing and treating an ADAM or interactor gene-
CC associated disorder, e.g. asthma, atopy, obesity or inflammatory bowel
CC disease. The present sequence is a gene (or gene fragment) for one of the
CC above mentioned genes. NOTE: This sequence may contain one of the SNPs
CC detailed in table 5 of the specification but their positions cannot be
CC determined using the information given in the patent.

PT   New isolated cancer-associated polynucleotides and polypeptides useful
PT   for diagnosing, preventing or treating cancers, especially lymphoma and
PT   leukemia, or in screening for agents that modulate cancer.
XX
PS   claim 16; seqid 536; 310pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
CC   in the specification, or its complement. The nucleic acids encode cancer-
CC   associated proteins. Also included are an expression vector comprising
CC   the isolated nucleic acid cited above, a host cell comprising the above
CC   recombinant nucleic acid or expression vector, a microarray for detecting
CC   a cancer-associated (CA) nucleic acid comprising at least one probe
CC   comprising at least 10 contiguous nucleotides of any of the above-
CC   mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC   an open reading frame of a CA sequence selected from any of the 95
CC   polynucleotide sequences as mentioned in the specification, or its
CC   complement), an isolated antibody, (or its antigen binding fragment) that
CC   binds to the above polypeptide, a hybridoma that produces the above
CC   monoclonal antibody, a pharmaceutical composition comprising the above
CC   antibody and a pharmaceutical excipient, a kit for detecting cancer
CC   cells(comprising the antibody cited above, methods for diagnosing cancer
CC   or for detecting the presence or absence of cancer cells in an
CC   individual, a method for inhibiting growth of cancer cells in an
CC   individual, a method for delivering a therapeutic agent to cancer cells
CC   in an individual, an electronic library comprising the above
CC   polynucleotide or polypeptide (or their fragments), methods of screening
CC   for anticancer activity or for a bioactive agent capable of modulating
CC   the activity of a CA protein (CAP), methods for detecting cancer
CC   associated with expression of a polypeptide in a test cell sample, a
CC   method for treating cancers and a method for inhibiting the expression of
CC   CA gene in a cell. The composition and methods are useful for detecting,
CC   diagnosing, preventing and treating cancers, especially lymphoma and
CC   leukaemia. These may also be used in screening for agents that modulate
CC   cancer. The present sequence is a human CAP genomic sequence. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PS   Claim 1; SEQ ID NO 148; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   New nucleic acids encoding ten different olfactory receptor proteins and
PT   their biallelic markers, are useful in genetic analysis and in screening
PT   for compounds which bind to the receptor proteins.
XX
PS   Claim 1; Page 103-141; 155pp; English.
XX
CC   Ten new olfactory receptor proteins and their biallelic markers have been
CC   described. The sequences encoding these receptor proteins and which
CC   contain the biallelic markers can be used for genotyping. The olfactory
CC   receptor proteins can be used to screen for substances which bind to
CC   them. See GENESEQ records AAZ93816-25 and AAY83386-95

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 622; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
```

```
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

XX
PT   Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating nervous system cancers
PT   and metastases.
XX
PS   Disclosure; SEQ ID NO 10691; 1701pp + Sequence Listing; English.
XX
CC   The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC   (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC   medical conditions e.g. by protein or gene therapy. The genes are
CC   isolated from a range of human tissues disclosed in the specification.
CC   The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC   the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC   ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC   breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC   disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC   anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC   multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC   cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC   ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC   infectious diseases such as viral, bacterial, fungal and parasitic
CC   infections. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT anemia or hemophilia.
XX
PS Disclosure; SEQ ID NO 983; 1512pp; English.
XX
CC The invention comprises the amino acid and coding sequences of human
CC secreted proteins. The DNA and protein sequences of the invention are
CC useful for detecting, preventing, diagnosing, prognosticating, treating
CC or ameliorating: haematopoietic or haematological disorders (e.g. anaemia
CC and haemophilia); inflammatory disorders (e.g. inflammatory bowel disease
CC and Crohn's disease); neoplastic disease (e.g. cancer and leukaemia);
CC wound healing and disorders of epithelial cell proliferation; immune
CC disorders (e.g. autoimmune disorders and asthmatic disorders);
CC cardiovascular disorders (e.g. atherosclerosis and myocarditis);
CC infectious disease (e.g. HIV/AIDS); endocrine disorders (e.g. diabetes);
CC and gastrointestinal disorders (e.g. duodenal ulcers and
CC gastroenteritis). The present DNA sequence was used in the
CC exemplification of the invention.

XX
CC The invention relates to novel human genes (ABZ66891-ABZ68209) and the
CC encoded secreted proteins (ABP99470-ABP99872) useful for preventing,
CC treating or ameliorating medical conditions e.g. by protein or gene
CC therapy. The genes are isolated from a range of human tissues disclosed
CC in the specification. The nucleic acids, proteins, antibodies and
CC (ant)agonists are useful in the diagnosis, treatment and prevention of:
CC (a) cancer, e.g. breast and ovarian cancer and other cancers of the
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC lung or urogenital; (b) immune disorders e.g. Addison's disease,
CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC bacterial, fungal and parasitic infections

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 1108; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   New 5-Hydroxytryptamine receptor type 3B polynucleotide, useful for
PT   diagnosing and/or treating a setrone-treatable disease such as disorders
PT   of central and/or peripheral nervous system e.g., schizophrenia.
XX
PS   Claim 1; Page; 150pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding an HTR3B (5-
CC   hydroxytryptamine [5-HT] receptor type 3B) polypeptide or fragment having
CC   an amino acid substitution. The polynucleotide of the invention
CC   demonstrates antiemetic, tranquiliser, neuroleptic, antialcoholic,
CC   antimigraine, analgesic and gastrointestinal activities and may be useful
CC   in preparing a composition for diagnosing or treating a disease,
CC   particularly a setrone-treatable disease. Such a disease or dysregulation
CC   is related to the central and peripheral nervous system or secondary to
CC   drug treatment, such as postoperative nausea and/or vomiting, chronic
CC   fatigue syndrome, obsessive-compulsive disorders, schizophrenia,
CC   alcoholism, anxiety disorders, tourette syndrome, migraine, headache and
CC   gastrointestinal motility disorders, preferably nausea and/or vomiting
CC   secondary to cancer chemotherapy. The polynucleotides and polypeptides
CC   may also be useful as forensic markers. The current sequence is that of
CC   the human HTR3B SNP variant DNA of the invention in which bases 36678-
CC   36680 of the alternative SNP form have been deleted. This sequence is not
CC   shown in the specification per se but was created by the indexer using
CC   information from claim 1.

PT   Use of setrones for preparing a pharmaceutical composition for treating
PT   or preventing setrone-treatable diseases in a subject having in its
PT   genome less than three copies of a polynucleotide encoding a functional
PT   CYP2D6 polypeptide.
XX
PS   Disclosure; SEQ ID NO 52; 153pp; English.
XX
CC   The present sequence comprises the human 5-hydroxytryptamine receptor
CC   type 3 HTR3B gene. In a variant of the gene ADF83375, nucleotides 36678-
CC   36680 (AAG) of this sequence are deleted. The invention relates to the
CC   use of setrones (antiemetics) for treating and/or preventing setrone-
CC   treatable diseases in a subject having in its genome fewer than 3 copies
CC   of a polynucleotide encoding a functional CYP2D6 polypeptide, and also
CC   having in its genome a second variant allele comprising a polynucleotide
CC   capable of hybridising to a HTR3B gene having AGG at positions 36678-
CC   36680. The treatment regimen can be modified according to the genotype of
CC   the subject's CYP2D6 and/or HTR3B gene. Non-responders to antiemetic
CC   therapy can be identified on a pharmacogenetic basis, allowing a suitable
CC   therapy to be selected. The setrone-treatable diseases are postoperative
CC   nausea and/or vomiting, or nausea and/or vomiting secondary to cancer
CC   chemotherapy, radiation therapy, migraine, acetaminophen poisoning,
CC   prostacyclin therapy, and opioid treatment, spinal or epidural opioid-
CC   related pruritus, acute levodopa-induced psychosis, bulimia nervosa,
```

```
CC   fibromyalgia, chronic fatigue syndrome, obsessive-compulsive disorders,
CC   schizophrenia, alcoholism, cocaine addiction, opioid withdrawal syndrome,
CC   drug withdrawal phenomena, anxiety disorders, cognitive disturbances,
CC   neuroleptic-induced tardive dyskinesia, Tourette's syndrome, migraine
CC   headache or gastrointestinal motility disorder (all claimed).

PT   New 5-Hydroxytryptamine receptor type 3B polynucleotide, useful for
PT   diagnosing and/or treating a setrone-treatable disease such as disorders
PT   of central and/or peripheral nervous system e.g., schizophrenia.
XX
PS   Claim 1; SEQ ID NO 49; 150pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding an HTR3B (5-
CC   hydroxytryptamine [5-HT] receptor type 3B) polypeptide or fragment having
CC   an amino acid substitution. The polynucleotide of the invention
CC   demonstrates antiemetic, tranquiliser, neuroleptic, antialcoholic,
CC   antimigraine, analgesic and gastrointestinal activities and may be useful
CC   in preparing a composition for diagnosing or treating a disease,
CC   particularly a setrone-treatable disease. Such a disease or dysregulation
CC   is related to the central and peripheral nervous system or secondary to
CC   drug treatment, such as postoperative nausea and/or vomiting, chronic
CC   fatigue syndrome, obsessive-compulsive disorders, schizophrenia,
CC   alcoholism, anxiety disorders, tourette syndrome, migraine, headache and
CC   gastrointestinal motility disorders, preferably nausea and/or vomiting
CC   secondary to cancer chemotherapy. The polynucleotides and polypeptides
CC   may also be useful as forensic markers. The current sequence is that of
CC   the human HTR3B gDNA of the invention.

XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting the
CC   nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention

PT   Identifying nucleic acid sequences as biomarker for disease, by
PT   identifying nucleic acid sequences comprising methylated CpG site and
PT   down-regulated in diseased cells and comparing its expression level with
PT   demethylated nucleic acid.
XX
PS   Claim 11; SEQ ID NO 91; 27pp; English.
XX
CC   The invention relates to a method (M1) for identifying one or more
CC   nucleic acid sequences useful as a biomarker for a disease to be
CC   detected. (M1) involves identifying nucleic acid sequences comprising
CC   methylated CpG site in promoter-first exon region and that are down-
CC   regulated in diseased cells, comparing expression level of nucleic acid
CC   sequences with that of demethylated nucleic acid sequences and
CC   identifying nucleic acid sequences exhibiting increase in expression
CC   after demethylation. Also described: (1) detecting (M2) the presence or
CC   stage of a disease in a subject, which involves determining the degree of
CC   methylation of one or more CpG sites on nucleic acid sequences in a
CC   biological sample obtained from the subject, and determining the presence
CC   of, predisposition to, or stage of the disease in the subject based on
CC   the degree of methylation; (2) monitoring the onset, progression, or
CC   regression of a disease in a subject; (3) determining the efficacy of a
CC   test compound for inhibiting a disease in a subject; and (4) a kit (I)
CC   useful for diagnosis, prognosis, staging, monitoring, and therapeutic
CC   treatment of a disease. (M1) is useful for identifying one or more
CC   nucleic acid sequences useful as a biomarker for a disease to be
CC   detected, where the nucleic acid sequences are useful for detecting, the
CC   presence or stage of a disease such as cancer e.g. colorectal cancer in a
CC   subject. The present sequence represents a specifically claimed human
CC   genomic sequence for use in the method of the invention. Note - The
CC   sequence data for this patent is not represented in the printed
CC   specification but was obtained in electronic format from the USPTO web
CC   site.

XX
PT   New cardiovascular system related polynucleotides and polypeptides,
PT   useful for diagnosing, treating and/or preventing disorders of the
PT   cardiovascular system.
XX
PS   Claim 1; SEQ ID NO 2258; 674pp; English.
XX
CC   Sequences AAS35741-AAS36942 represent genomic DNA molecules, which encode
CC   the cardiovascular system antigen polypeptides of the invention.
CC   Cardiovascular system antigens and their associated polynucleotides are
CC   useful in the diagnosis, treatment and prevention of various types of
CC   disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs,
CC   chickens or sheep. A pathological condition can be determined by
CC   detecting the presence or absence of a mutation in a cardiovascular
CC   system antigen polynucleotide. The treatable disorders include autoimmune
CC   diseases such as rheumatoid arthritis, hyperproliferative disorders such
CC   as neoplasms of the breast or liver, cardiovascular disorders such as
CC   cardiac arrest, cerebrovascular disorders such as cerebral ischaemia,
CC   nervous system disorders such as Alzheimer's disease, infections caused
CC   by bacteria, viruses and fungi, ocular disorders such as corneal
CC   infection, endocrine disorders such as premature labour and infertility,
CC   gastrointestinal disorders such as Crohn's disease, renal disorders such
CC   as glomerulonephritis and respiratory disorders such as asthma and
CC   pleurisy. The polypeptides can also be used to aid wound healing, to
CC   prevent skin aging due to sunburn, to maintain organs before
CC   transplantation, to regenerate tissues and in chemotaxis. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

DR   WPI; 2003-743766/70.
XX
PT   New cardiovascular system related polynucleotides and polypeptides,
PT   useful for preventing, treating, or ameliorating a medical condition,
PT   such as cancer of cardiovascular tissues and cancer metastases.
XX
PS   Claim 1; SEQ ID NO 2258; 262pp; English.
XX
CC   The invention relates to human cardiovascular system related polypeptides
CC   and the polynucleotides encoding them. The polypeptides, polynucleotides
CC   and antibodies to the polypeptides are useful for diagnosing a
CC   pathological condition or a susceptibility to a pathological condition,
CC   for preventing, treating, or ameliorating a medical condition, such as
CC   cancer of cardiovascular system tissues, proliferative disorders, foetal
CC   and developmental abnormalities, haematopoietic disorders, diseases of
CC   the immune system, AIDS, autoimmune diseases (e.g., rheumatoid
CC   arthritis), inflammation, allergies, neurological disorders (e.g.,
CC   Alzheimer's disease, Parkinson's disease), cognitive disorders,
CC   schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis,
CC   diabetes, atherosclerosis, cardiovascular disorders, angiogenic
CC   disorders, kidney disorders, gastrointestinal disorders, pregnancy-
CC   related disorders, endocrine disorders and infections. The nucleic acids
CC   are also useful for chromosome identification, radiation hybrid mapping
CC   or long-range restriction mapping. The polypeptides and polynucleotides
CC   may also be used as food additives or preservatives to increase or
CC   decrease storage capabilities, fat content or other nutritional
CC   components. This sequence represents human cardiovascular system related
CC   genomic DNA of the invention.

PA (HUMA-) HUMAN GENOME SCI INC.
XX
PI Rosen CA, Ruben SM, Barash SC;
XX
DR WPI; 2004-081713/08.
XX
PT New cardiovascular system-related nucleic acid molecule, useful for
PT diagnosing, preventing or treating diseases of the cardiovascular system,
PT and in chromosome mapping, drug screening or in pharmacogenomics.
XX
PS Disclosure; SEQ ID NO 2258; 262pp; English.
XX
CC The invention relates to an isolated nucleic acid molecule encoding a
CC human cardiovascular system associated polypeptide (or antigens), or its
CC fragment. Also included recombinant vectors, recombinant host cells, an
CC isolated human cardiovascular system associated polypeptide (including
CC its fragment, allelic variant, species homologue or epitope), an isolated
CC antibody that binds specifically to a human cardiovascular system
CC associated polypeptide, diagnosing a pathological condition or
CC susceptibility to a pathological condition (comprising determining the
CC presence or absence of a mutation in human cardiovascular system
CC associated nucleic acid and diagnosing a condition based on the presence
CC or absence of the mutation), identifying a binding partner to human
CC cardiovascular system associated polypeptides, the gene corresponding to
CC the human cardiovascular system associated cDNA sequence and identifying
CC an activity in a biological assay comprising expressing the human
CC cardiovascular system associated cDNA in a cell, isolating the
CC supernatant, detecting an activity in a biological assay and identifying
CC the protein in the supernatant having the activity. The human
CC cardiovascular system associated nucleic acids and polypeptides are used
CC to prevent, treat or ameliorate a medical condition (for example in
CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep), for
CC example autoimmune diseases such as rheumatoid arthritis,
CC hyperproliferative disorders, for example neoplasms of the breast or
CC liver, cardiovascular disorders, for example cardiac arrest,

PT   New detection reagent capable of detecting 1, 100, 500, 1000 or 5000 or
PT   more single nucleic acid polymorphisms, useful in identifying an
PT   individual having or at risk of developing type II diabetes or obesity.
XX
PS   Disclosure; SEQ ID NO 140; 31pp; English.
XX
CC   The invention relates to a detection reagent capable of detecting one or
CC   more single nucleic acid polymorphisms. The invention also relates to
CC   determining whether a trait is linked to one of the human chromosomes or
CC   its sub-region, a computer readable medium having stored in it the SNP
CC   relational information given in the specification, an isolated nucleic
CC   acid molecule for detecting at least one SNP given in the specification
CC   comprising at least about 12 contiguous nucleotides, genotyping at least
CC   one SNP position given in the specification in a sample, identifying an
CC   individual having or at risk of developing a disorder and a kit
CC   comprising at least one container containing the detection reagent.
CC   Determining whether a trait is linked to one of the human chromosomes or
CC   its sub-region comprises determining whether the trait is linked to one
CC   or more SNPs using the detection reagents. Genotyping at least one SNP
CC   position given in the specification in a sample comprises contacting the
CC   sample with a detection reagent that differentiates between alternative
CC   alleles at at least one SNP position given in the specification, and
CC   determining which allele is present at the at least one SNP position.
CC   Identifying an individual having or at risk of developing a disorder
CC   comprises genotyping at least one SNP given in the specification in a
CC   nucleic acid sample from the individual. The disorder is type II diabetes
CC   (non-insulin dependent diabetes) or obesity. The detection reagent is
CC   useful in identifying an individual having or at risk of developing a
CC   disorder, particularly type II diabetes or obesity. This sequence
CC   represents human genomic DNA used in the scope of the invention. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format from USPTO at
CC   seqdata.uspto.gov/sequence.html.
